# Line-up

## Serious stuff

### 14 Review: Basic Tutorials

If you yearn to code but don't know where to start, this new set of tutorials could be a good place to start. Simon discovers whether they are.

### 14 Review: Disc Imager

Why take four disks into the shower? With this handy utility you can save all the data from four 3-inch disks on one 3.5-inch disk. But how good a job does it do?

### 15 Book review: Computer Dictionary

Are you shunned in social circles because you don't know what an SQL is? Fret no more. Here's the ultimate jargon-buster.

Ever wanted to write a game but have been put off by the fact that, well, it just seems so darned difficult? Then Zack Construction Kit (page 20) might be the short cut you need.

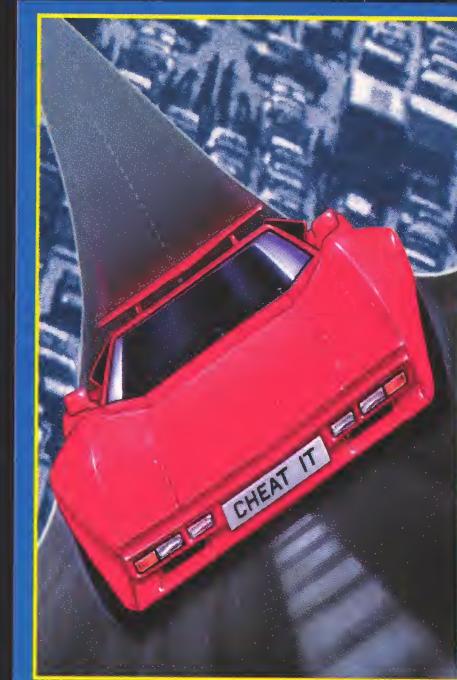

## Leisure zone

### 30 Writing adventures: Venture Forth

Interaction Part Two, or How To Get Characters In Your Adventures To Talk To You And Give You Things In Quite A Few Fairly Easy Steps. Hey, snappy title or what?

### 37 Power-Up

Cheats never win. Or do they? The Amstrad Action team is certainly not averse to the odd creative interpretation of the rules. Check out what kind of people are being allowed to create the world's greatest CPC magazine every month.

## Cover feature

9

**Take the easy route**  
The essential Amstrad Action guide to an easier life - from hints and tips for when you're working on your word processor through to cheats for all the top CPC games, we reveal the tricks of the trade that'll take the strain out of your computing life. Don't be a martyr to the work ethic, read this and discover all the short cuts to Easy Street you'll ever need.

### 17 Interview: Sentinel

A relatively new company on the CPC scene, Sentinel has already given us a vast range of tutorial books and Ball Bearing. So what else have they got planned?

### 20 Preview: Zack Game Creator

If you can't beat 'em, write 'em. What d'ya mean you don't know how to code? That's no excuse. Zack comes with its own specialised game-writing language.

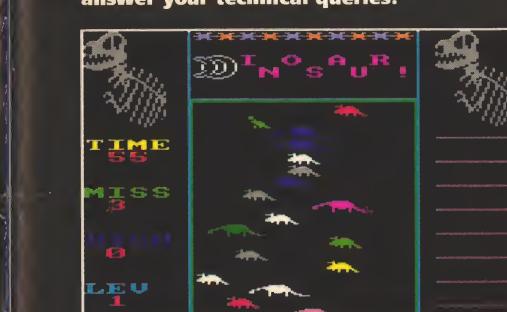

Some of the best games coming out at the minute are PD. The Smiley Affair (reviewed on page 41) is a great little puzzler.

### 41 Reviews: Public Image

Two of the latest games to hit the public domain come under close scrutiny from the Amstrad Action formation reviewing team.

### 42 Feature: Encyclopaedia Amstradica

In the countdown to issue 100 we begin a three-part, completely illogical A-Z of everything about the CPC we reckon's worth mentioning. If it ain't in it, it, obviously didn't occur to us. But seriously, folks, by Volume three you should have a pretty reference guide to the basics of CPCing.

Us? Jumping on the Jurassic Park bandwagon? No. It's just a coincidence that one of our listings in Type-ins (page 32) this month just happens to be about dinosaurs.

### 46 Round-up: Budget games

Completing the task we set ourselves last issue, we present a round-up of every game currently available on budget from the major software labels. And we also rate them so that you know which ones aren't worth buying even at a mere £3.99

### 52 Reviews: Cart games

What will win the coveted Cart of the Month award this time out? Will it be:  

- Operation Thunderbolt
- Skeet Sheet
- Switchblade
- Navy Seals, or
- The Enforcer?

 And is this the last we'll see of the carts?

## Regulars

### 4 Covertape

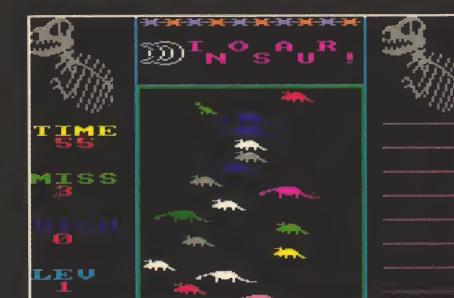

I bet you've already loaded The Blues Brothers and got stuck. So you come crawling to us expecting us to give you some instructions. Well, here they are.

### 6 Amscene

It can't be! Surely not! We thought it was all some cruel joke, but at last it looks like the dream is about to become a reality. Are you ready for Street Fighter 2?

### 26 Techy Forum

Richard Fairhurst loves a good challenge. But we wrench him away from trying to open a milk carton to make him answer your technical queries.

Us? Jumping on the Jurassic Park bandwagon? No. It's just a coincidence that one of our listings in Type-ins (page 32) this month just happens to be about dinosaurs.

### 51 Gamebusting: Cheat Mode

In an issue all about cheating and short cuts Cheat Mode remains pretty much unaffected because such things have been its stock in trade since time began (or sometime soon after - AA is nearly 100 issues old you realise). Among the games being busted by Cheatfinder General Lee Rouane this time around are: Spellbound Dizzy, Lords of Chaos, Anarchy, Combat Zone, Robocop, Batman and Biff. Is no game safe from this man?

### 25 Back Issues

The page where you can admire a collection of the finest magazine covers. And order some back issues if you like.

### 32 Type-ins

Loads of luvverly listings for you to type in and try out. And for added educational value, there's our new Workshop feature.

### 38 Letters

The pen is mightier than the sword so if you want to let off some steam, send us a letter instead of coming looking for us armed with a dirty great sabre. It makes sense all round, really.

### 56 Subscriptions

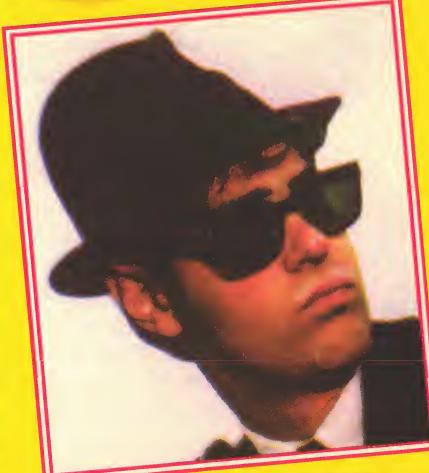

Simon's just clinched a deal which has secured seven absolutely awesome games for the coverts for the next seven months, including Elite. So make sure you don't miss any of them by subscribing to AA. We offer a very reasonable rate.

### 58 Next Month

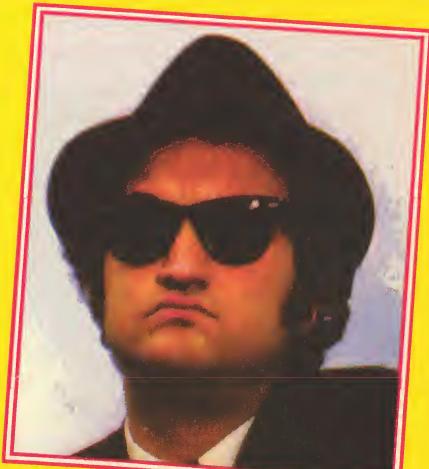

It still seems odd to me that we flag the Next Month page on the third page of the magazine. It's not like it ever moves. It's always on the second from last page. Perhaps next month we might stick Next Month on the cover. (Anarchy! Yeah! - Andy.) I'll take that as a yes vote.

# BLUES BROTHERS

Jake and Elwood are here and they're on a mission from Amstrad Action to provide you with five stonking levels of top-notch platform action.

Elwood goes for the moody pose...

...while Jake fails to disguise the fact that he's actually fallen asleep.

Wanna know something that'll blow your socks off, taking your Doc Martins with them? When we originally reviewed The Blues Brothers in AA79 we gave it a massive...

**95%**

Just turn the page for all the details.

# AMSTRAD ACTION SPECIAL

## The Blues Brothers

"Ooooh, I woke up this morning, my babe had run away, my dog had died, my eggs weren't fried, it's gonna be a blue, blue day." Er, Sarah, we said your first job as our new writer was to play the Blues Brothers, not the blues...

You've seen the film, bought the soundtrack, seen the tributes, bought the T shirt, used the loo roll, now you can be *The Blues Brothers*... well, sort of. This month, not only do you get a fabulous magazine for the moth-defying price of five pence (less than three pounds) but you're also getting all five-levels-worth of the brilliant *Blues Brothers*.

But you're in for a tough time. Y'see it's a hard life being a successful blues partnership. So many people are consumed with jealousy that they'd do anything to bring you down. Even the local sheriff Josh McKenzie doesn't like you. The last time you ventured into these parts you left so much mess behind that he's stolen all your essentials and wants you to 'get outta town' in his best

This is what you're looking for. It's the end of the first level, but before you pick up the guitar collect some of those records.

western accent. Don't let him speak to you like that (you'd prefer him to speak in a

Welsh accent? - Dave). You've got a gig to play tonight. Find your instruments and have a ball. *The Blues Brothers* are back in town, ready or not.

When you start the game you have to make a decision. I'm sorry, but it has to be done, so face up to your responsibilities; which Blues Brother do you want to be, Elwood (the thin one) or Jake (the fat one)? Don't worry if you change your mind later on in the game, because you can swap when you reach a new level. A change is as good as a rest I always say. There isn't much difference between the two, but Jake

Lots of lovely vinyl records to boost your energy. You don't get that with CDs.

## Nobody likes a bad blueser

Iosocies hides on rooftops and fires his big gun at you without mercy. He may look like a Nazi but I'm sure his mum likes him.

The Mad Doctor lurks under the stairs and stabs you with a needle.

This Sergeant Major patrols the alleys and shouts at you. Ye ho ho and a bottle of rum, If you're not blue you must be dumb.

This one's a happy soul by the name of Steel O'Billy. He'll fire rivets as soon as look at you. He used to work in the shipyards.

## Collectables

Every 100 records collected wins an extra energy heart.

Pick up these broken records at your peril. Deduct 50 records from your total for each one.

Collect these hearts to increase your energy level.

Some pressies are nice, and some are nasty. Find out which is which the hard way.

Extra life. Why a hat and glasses signifies an extra life is a bit weird, though.

Use these balloons to float through hundreds of records and find new lands.

PAUSE

ENCORE  
BONUS  
LIVES  
ENERGY

3

02  
3 2 2

PUSH FIRE BUTTON

To find out how many lives you've got left, and to pause the game, press P. Simple eh?

worry, we'll get back to them in a minute. Anyway, remember the way your parents give you nearly what you want, your mates give you something you didn't know you wanted and your gran gives you something you'd rather do without completely, thank you very much? The pressies in *Blues Brothers* are the same - some give you more points, some take away points while others immobilise you for a few seconds (but at least you don't end up with a naff jumper that'd fit comfortably on a pregnant hippo - Dave).

There are loads of nasty nasties and 'orrible 'orribles to avoid. So what powerful weapons do you think you've got against these foes? A big gun? Hand grenades? A violin case containing a machine gun? No such luck. Crates. Yep, I said crates. You have to pick up crates and chuck them at the baddies. Make sure your chosen victim is on the same screen as you before you throw a

crate because it'll disappear if you miss, which is a bit of a waste of ammunition.

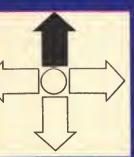

The crates are like policemen; there's never one around when you want one. If you see a crate, pick it up so you've got it ready to lob. But if you need to make a mighty leap you'll need to drop the crate first as it'll weigh you down, so that you can't jump as high or as far as normal.

Each level is on a scale so vast, you can expect to see *The Blues Brothers* listed as a synonym for vast in the next edition of Roget's Thesaurus. There's a superb soundtrack, with different music for each level, and on top of that there's loads to laugh at. From the animation of the lead characters to the collision detection, this game fulfills all the requirements of a classic game. It's even got multi-directional scrolling! And it's on your covetape. And we recommend you get it up and running on your CPC as soon as possible.

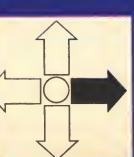

Now look what you've gone and done. That dodgy pressie has immobilised you.

## Controls

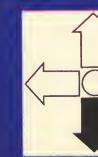

Jump

P (on keyboard) - Pause

Crouch down

Joystick down & left/right - crawl along the ground.

Move left (Joystick right - move to the right)

Pick up crates Press fire again to throw.

## Loading instructions

Just pop the tape into your machine, making sure it's rewound to the start of side one, press CTRL and ENTER (or type RUN"), then press any key and the tape will start loading.

After pressing Fire to get past the earlier loading screens, a tiny little 'REWIND' will appear on the screen. When this happens, turn the tape over (yes, that's right, turn the tape over), rewind it to the start of side B and press PLAY again.

## The tape won't work? Surely not?

We go to great lengths to make sure that our covetapes work properly. However, if you still have difficulty, try these solutions:

- Loading at several different volume levels (if you're using an external tape recorder).
- Cleaning the tape heads. This can be done with any commercially available cleaning kit.
- Adjusting the cassette recorder's head alignment. The alignment screw is located just to the left of the tape head, and is usually accessible through a small hole. Turn it a fraction at a time with a jeweller's screwdriver. When the crispest sound is heard, the alignment is spot on.
- Tapping the cassette GENTLY against a table edge - the spools may be sticking or jammed.

If you still can't get the tape to load then send the tape, along with a brief description of the problem and a stamped SAE to:

**AA98 Covetape Returns,**  
**Ablex Audio Video Ltd,**  
**Harcourt, Halesford 14,**  
**Telford, Shropshire TF7 4QD**

## But I want a disk version!

If you've got a disk drive, though, and you want a disk version of *The Blues Brothers*, you can order just such a wondrous artefact from our duplicators, Ablex. All you have to do is snip off the coupon on the bottom corner of this page and send it with a cheque/PO for £2 to:

**AA98 Disk Offer, Ablex**  
**Audio Video, Harcourt,**  
**Halesford 14, Telford,**  
**Shropshire TF7 4QD**

**Please don't return tapes to the AA office. Ever! If you do, we'll just feed them to Simon, and when you ring up to see where it's got to, we'll just make you feel stupid for not reading this bit in the first place. You have been warned!**

Ah - there's a little bit of space left over. I (it's Hairy here, by the way) think I'll tell you about the absolutely fab stuff you've got coming your way in the future on the tape - games like *Stormlord*, *Cybernoid*, *Exolon*, *Zynaps*, *Uridium*, *Nebulus* - can it get any better? Frankly, there's only one game to beat those lot - you'll find it on AA100...

# Amscene

**What's hot and not what's not on the CPC news front.**

## Our stance

Oi, Andy, I thought I asked you to change this photo.

Recently, AA has been accused of having 'vendettas' against various people in the CPC scene, mainly, it seems, because we don't give glowing reviews to everything produced by the indie CPC software developers. This, frankly, is ridiculous.

Our reviews are fair and frank remarks based on the quality of the software alone. If we had 'vendettas', then that would be publishing suicide in a market like the CPC's. We support the work of everyone who continues to develop for the CPC, but the harsh truth is that if a company releases a program that really is not up to scratch, it is more likely to put people off using their CPCs and buy another machine with software that suits their needs.

To keep the scene alive we need quality software, and kidding ourselves that something that's rubbish isn't just burying our heads in the sand. **Dave**

## War reparations

Galactic Warfare is going through a bit of a revamp. In response to our review of the SF strategy game last issue, the author, Peter Gardner, has decided to snazz up the graphics and rewrite the manual, so the final version should be miles better than the one we reviewed. It's that kind of thing that really reinforces your faith in the CPC scene.

So the address you'll be needing to order the game is: PJ Gardner,

## No joke - SF2 is coming

Miracle of miracles! It looks like Street Fighter 2 is actually going to appear! Trust us – it's coming. Don't run out and buy it just yet, though – US Gold still haven't confirmed a date, but it looks like it could be before the end of the year, and it'll be on budget straight away.

It's for this reason, then, that we're going to have a few minutes silence in memory of an absolutely wonderful running gag...

## Get it on tape

We've just received word of a new PD library opening up called COLROB. What's so great about that, then? Well, it's a tape-only library! Wow, and indeed, wow. If you want a catalogue, send an SAE to: COLROB PD, 9 Aviemore Road, Hemlington, Middlesbrough, Cleveland.

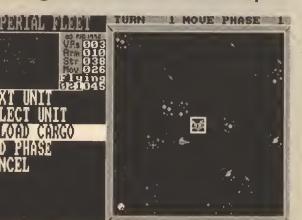

## It's back

Demon PD Library has been completely re-structured and now contains 180 selections of quality software. For a catalogue, send an SSAE to: 47 Hilton Avenue, Hall Green, Birmingham B28 OPE.

## New on the 'zine

News has also just reached us of a new fanzine on the scene, CPC Undercover. Each issue costs 80p, and is 16 A5 pages big. The first issue, which has been edited, written, designed and just about everything else by David Crookes features a coverdisk... of a sort. If you want to be the proud owner of the PD programs Zap't'Balls, Croco Magneto and Rambase Three you need to send a disk along with your order. Write to: CPC Undercover, 37 Trimingham Drive, Brandlesholme, Bury, Greater Manchester BL8 1JW.

2 Crofton Road, North End, Portsmouth, PO2 0NT (sorry about missing that detail out last time).

More colour, more instructions coming for Galactic Warfare

## Summer knights

Okay, naff headline, I admit, but the point is that there's a new PD library starting up called Knights PD. The librarian, Tommy MacDonald, is on the look out for any PD software, whether it's stocked in other libraries or not. This is where you come in – get coding! I know the PD scene will welcome another library – that is, after all, part of the spirit of PD (an active and friendly scene).

Oh yeah – you'll be wanting an address: 7 County Cottages, Piperhill, Nairn IV12 5SE.

## FESTival time

And the FES headlines this month (anyone would think they paid our wages) are – bong – Radio One will be broadcasting live from the show – bong – cheap rates for school parties – bong – there'll be a ride called the Typhoon that packs a punch in the G-force stakes and – bong – it'll feature a massive arcade hall bursting to the seams with all the latest games from all the major software companies.

Now the bit where we go into more detail. This year, the show is offering a Special Schools' Rate (that's not a rate for special schools, but a special rate for schools). It's easy – all you have to do is convince your teacher to get a group of 15 or more together and write to the FES care of Future Publishing, 30 Monmouth Street, Bath, Avon BA1 2BW and they can get you all in for £6 per head! If you have any trouble persuading them, show them this next paragraph:

Hello there teacher. Listen, and listen good. If you don't take these poor technology-starved sprogs to the FES this year, I'll name you in this national newstand magazine as naff teacher of the year. And yes – this is a threat. Yours, Hairy.

There – that should convince them. But what about you? Well, could we tempt you with Simon Mayo, who will be broadcasting directly from the show for Radio One? Plus there are going to be some pretty amazing fair-type rides, such as Dodgems and a thing called the Typhoon – and there's only one of these in the country. Then there are all those games in the most massive arcade you'll have ever seen. Oh yeah, and we'll be there as well (on the Friday), but cheer up, it's not all bad...

The ticket hotline is 051 356 5085. Tickets are going fast.

## Prices crisis

Last issue in the Machine Code tutorial review things got a little confused. If you want to get hold of the tutorials, they'll cost £3 each from Sentinel (address opposite). The accompanying software costs £3 if you don't send a disk, £1 if you do.

## The Amscene Directory

It's only been running for two months and we've already changed the format. Typical, eh? Just like the way they rearrange all the shelves in the food bit of Marks and Spencer every week. But there is a method to our madness. Y'see we reckon that the new lay-out makes the directory easier for you to use. And are we right or are we right?

Anyway, same rules apply as last month. If you think you offer a service that should be included in the directory write in to: Amscene Directory, Amstrad Action, 30 Monmouth Street, Bath, Avon, BA1 2BW. We reserve the right not to include anything that we feel is against the spirit of the section. Why? Because we can.

## PD Libraries

### Presto PD

**Adventure PD**  
081 310 9877  
Specialists in adventures.

### Amsoft

**Lissiany, Cloyne, Middleton, Ireland**  
Large range of European stuff.

### Amstrad Fun

**8 Springfield Drive, Templeogue, Dublin.**  
Large range of European stuff.

### Colrob PD

**9 Aviemore Road, Hemlington, Middlesbrough**  
New tape-only PD library

### Dartsma

**081 317 1170**  
And they do loads of other CPC-related stuff as well.

### Demon

**47 Hilton Avenue, Hall Green, Birmingham B28 0PE**  
3.5-inch disk drive owners might like to investigate.

### GD PD

**49 Woodville, Barnstaple, Devon EX31 2HL**  
New library with a large selection.

### PD Fun

**41 Michaelgate, Kirkby Lonsdale, Via Carnforth, Lancs LA6 2BE**  
A policy of 'no serious software.'

An AA recommended user group.

## User Groups

### Amstrad Contact

**0403 753348**  
Sussex-based group run by Dave Muggeridge with a technical helpline.

### UAUG (United Amstrad User Group)

**0329 234291**  
The UAUG's fanzine.

## Don't miss out on AA99

Because apart from all the usual reasons why you shouldn't miss AA, it's going to be a Desktop Publishing special with features, tips and even programs on the covertape all about CPC DTP. So hand in this form to your favourite newsagent, and he'll reserve you a copy.

## Independent Software Companies

### Avatar

**0442 251705**  
Suppliers of Phil Craven products, and a few of the Bonzo titles (and don't ask what Bonzo titles are – it'd take too long to explain).

### BoxForm

**051 336 2668**  
A software house specialising in, would you believe, betting software. It takes all sorts in this world.

### Campursoft

**041 554 4735**  
You name it, they do it, really – take a look at the interview in ish 96.

### Gary & Scott Kennedy

**061 736 1204**  
Authors of Trakers, a truly great CPC game (don't argue).

### New Age Software

**01049-711-4201920**  
Responsible for the dull Zap'TBalls, the excellent Soundtrakk, and hopefully a few more titles.

### Quantum Computing

**0446 746920**  
The new breakaway sect of STS that looks set to pick up where the original good plans fell short.

### SD Microsystems

**0760 720381**  
Specialists in business software – take a look at the feature in AA93.

### Sentinel Software

**081 876 7032**  
Suppliers of selected STS titles (probably Quantum titles, now), and a few original products.

### Siren Software

**061 724 7572**  
It'd take a hell of a time to list everything they do – check out their ad (it's the yellow half-page one).

**Amstrad Action 99 will be the major event of next month, and I don't want to miss out.**

Dear Newsagent, could you please order me a copy of Amstrad Action, starting with the December issue, which'll hit the shelves on November 25th. Amstrad Action is published by Future Publishing (who also bring you the FES), and you can order it from your wholesaler. Thanks.

My name.....

My address.....

# EASY STREET

Welcome to the essential AA guide to an easy life. No longer will you have to suffer a CPC that'll only do what it's supposed to. We're going to let you in on a few tricks of the trade and reveal a few short cuts for everything from programming to games; you want infinite lives cheats for your word processor? You got 'em (Simon, are you feeling okay? - Dave).

## Machine Code

**These, to be frank, are the technical bits. If you don't understand them, sorry, but maybe in time you will (oh, hark at the wizened seer of the mountains - Dave).**

### BASIC moves

Let's start with something no-one will understand - moving the start of BASIC (if you want to re-arrange memory). There are several locations that'll need to be POKE'd. Where you see **hb**, it means high byte, and we think you can guess what **lb** stands for. Anyway, here it is for 464 users:

```
&ae81,1b  
&ae82,hb  
&ae83,1b+3  
&ae84,hb  
&ae85,1b+3
```

```
&ae86,hb  
&ae87,1b+12  
&ae88,hb  
&ae89,1b+12  
&ae8a,hb
```

But what about 664 and 6128 owners? Well...

```
&ae64,1b  
&ae65,hb  
&ae66,1b+3  
&ae67,hb  
&ae68,1b+3  
&ae69,hb  
&ae6a,1b+12
```

### Disk errors?

Sometimes, you'll be coding a program and you don't particularly want the CPC to throw a complete spazz every time there's a disk error. So, if you want to turn those pigging little messages off, you'll need to POKE **&be78** with **&ff**, and if you want to turn them back on, POKE the same address with **&00**.

By the same token, you can set the retry count quite easily - just POKE **&be66** with the number of retries you wish the machine to attempt.

### String editing?

If you have ever tried to write a slightly more complex package in Machine Code, you will probably have come up against all the usual

### SYMBOL AFTER 32

```
h=HIMEM+1  
LOAD "filename.FNT",h
```

Replace the filename with the name of your font.

### No reset

Probably the oldest one in history, this - it's for disabling CTRL, SHIFT and ESC method of resetting the machine:

```
POKE &BDEE,&C9
```

### A few more POKEs

464 owners only, this time (it's the 6128's turn to feel left out) with a few functions that BASIC really does lack:

```
POKE &B4E7,&00 Shiftlock off  
POKE &B4E7,&FF Shiftlock on  
POKE &B4E8,&00 Capslock off  
POKE &B4E8,&FF Capslock on
```

### Showy

Or failing that, you might be designing fonts using OCP Art Studio. If so, you'll be wanting to load them back into memory. Insert these lines into your program:

```
10 OUT &BC00,1:FOR x=1 TO 40
```

### Speed demon

Tape owners will always be unhappy with their tape loading times, but you can speed them up:

## 50 LABOUR-SAVING TIPS

&ae6b,hb  
&ae6c,1b+12  
&ae6d,hb

### Disk errors?

Sometimes, you'll be coding a program and you don't particularly want the CPC to throw a complete spazz every time there's a disk error. So, if you want to turn those pigging little messages off, you'll need to POKE **&be78** with **&ff**, and if you want to turn them back on, POKE the same address with **&00**.

By the same token, you can set the retry count quite easily - just POKE **&be66** with the number of retries you wish the machine to attempt.

### String editing?

If you have ever tried to write a slightly more complex package in Machine Code, you will probably have come up against all the usual

### SYMBOL AFTER 32

```
h=HIMEM+1  
LOAD "filename.FNT",h
```

Replace the filename with the name of your font.

### No reset

Probably the oldest one in history, this - it's for disabling CTRL, SHIFT and ESC method of resetting the machine:

```
POKE &BDEE,&C9
```

### A few more POKEs

```

### Showy

Or failing that, you might be designing fonts using OCP Art Studio. If so, you'll be wanting to load them back into memory. Insert these lines into your program:

```
10 OUT &BC00,1:FOR x=1 TO 40
```

### Speed demon

Tape owners will always be unhappy with their tape loading times, but you can speed them up:

## 50 LABOUR-SAVING TIPS

&ae6b,hb  
&ae6c,1b+12  
&ae6d,hb

### String editing?

If you have ever tried to write a slightly more complex package in Machine Code, you will probably have come up against all the usual

### Why?

To flash the screen, just call **&BD20**. Why you'd want to do this, we really don't know...

### 20 FOR t=1 TO 50:NEXT t

```
30 OUT &BD00,x:NEXT x
```

### Not many people...

There's something you may or may not know. If you don't, you will in about five seconds, and your life will be forever better for the knowledge:

If you own a disk drive, simply type in the name of the program you want to run. Hold down the Control key while you press the up arrow and the small Enter key, then let go of Control. It's dead simple, but we just thought you'd like to know.

### Explosion

The simple way to create explosion effects:

```
10 ENV 1,15,-1,20  
20 OUT &BC00,8:OUT &BD00,1  
30 SOUND 1,0,300,15,1,,31  
40 WHILE (SQ(1) AND &00)>0  
50 WEND  
60 OUT &BC00,8:OUT &BD00,0
```

### Screen swapping

Here's a nifty little tip to let BASIC users store two screens in memory at once, and switch between the two, which makes life a hell of a lot easier. The second screen sits at address **&4000** and is summoned with **CALL &BC06,&40**. To use the normal screen, type **CALL &BC06,&C0**.

other side is that if you include a few of these codes in your work, it should completely baffle anyone trying to hack it.

ADD A,XH	DD 84
ADD A,XL	DD 85
CP XH DD BC	
CP XL	DD BD
DEC XH	DD 25
DEC XL	DD 2D

LD YH,nn	FD 26 nn
LD YL,nn	FD 2E nn

### Graphics modes

You can always tell 464 owners in the street, because they carry the pained expression of someone without some very useful BASIC commands. One such command is **GRAPHICS PEN**. If you do want to set the graphics modes, though, all you have to do is print a **CHR\$(23)** to the screen, followed by a **0** for normal graphics, a **1** for **XOR**, a **2** for **AND** and a **3** for **OR**.

## BASIC tips

Anything that makes programming less of a hassle has got to be a good thing, right? In which case this section's got more good things than the toy department at Harrods.

### Stripy text

Type the following in direct command mode - you could use this technique for better lettering on your games, or just for the novelty of it:

```
MODE 0:OPEN 7:CALL &BBFF
```

### Bye bye cursor

Many BASIC programmers get a little tired of their cursor. No worries, if you have a 464, that is - just turn it off:

```
POKE 45709,4
```

You might like to turn it back on, though:

```
POKE 45709,0
```

### Speed demon

Tape owners will always be unhappy with their tape loading times, but you can speed them up:

### Not many people...

There's something you may or may not know. If you don't, you will in about five seconds, and your life will be forever better for the knowledge:

If you own a disk drive, simply type in the name of the program you want to run. Hold down the Control key while you press the up arrow and the small Enter key, then let go of Control. It's dead simple, but we just thought you'd like to know.

### Explosion

The simple way to create explosion effects:

```
10 ENV 1,15,-1,20  
20 OUT &BC00,8:OUT &BD00,1  
30 SOUND 1,0,300,15,1,,31  
40 WHILE (SQ(1) AND &00)>0  
50 WEND  
60 OUT &BC00,8:OUT &BD00,0
```

### Screen swapping

Here's a nifty little tip to let BASIC users store two screens in memory at once, and switch between the two, which makes life a hell of a lot easier. The second screen sits at address **&4000** and is summoned with **CALL &BC06,&40**. To use the normal screen, type **CALL &BC06,&C0**.

## Massive multiface cheat zone update

I remember the days when I first joined AA, and in issue 90 (my second-ish, edited ably by Linda Barker, trivia fans), we did a complete Multiface cheat round-up of just about every game ever. Well, we thought this would be an absolutely excellent opportunity to treat all those who've only very recently joined us (there really are quite a few) to catch up on every Multiface cheat that we've printed in the mag since then. So if you add this list to your old one (issue 90's), you should have the most complete Multiface list of all time!

Those who haven't got Issue 90 can get it from back issues as we flatly refuse to reprint all six pages of the list here – sorry, but we've got better things to do with your time.

### A few more things:

- All POKEs are for tape versions unless marked with a D, such as Baby Jo.
- Take a look at the Balloon Buster POKE. This means that if you want to get infinite time, you have to enter both POKEs.
- For a complete guide on using the Multiface, turn to the Cheat Mode pages and read the boxout entitled The Multiface Way – we couldn't see the point of putting it in the same issue twice.
- Have fun!

Name	Addr	Poke	Effect
Baby Jo D	1503	AA	Infinite lives
	26EE	00	Infinite rattles
	2FBF	B7	Food stays on screen
	18AD	B7

## Game Cheats

**There are new games, there are old games and there are timeless classics that'll never die. But while these games may have immortal life, you don't. Well, not until now, anyway. Stand by for the ultimate classic cheats collection!**

Have we mentioned it'll be on AA100's covertape?

It's the game of the century, and it's coming up on our covertape with issue 100, so these tips should be come in handy.

First up, there's a handy way to dock with a space station without a docking computer. Simply hyperspace to a new system, and somehow get killed there. When you're returned to the title screen, press Y to load a new commander. Instead, save your commander to tape, and return into the game. Lo and behold, you're docked

Witch Space: it's the dark, mysterious, fourth dimension you travel through when in hyperspace. If you want to visit it as opposed to screaming through it at quite a few light years per second, pause the game and press F. From now on, whenever you hyperspace, you'll appear in this no-man's land. If you want to get back out, just pause the game and press F again.

Here's a really fun one for disk owners – select the 'load new commander' bit, and give the commander name ELITE. You'll then get to play a game with a quite strange array of bugs – the best of which being your rear lobster. Remember NEVER to save the file back on to your disk.

As for actually using the Witch Space thang, here's a great little tip from a few months back: 1 Find a cluster of two or three systems no more than 2.5 light systems apart. 2 Sell all your cargo. If possible arm yourself to the hilt with a mining laser, cloaking device and energy bomb. They'll be very useful.

3 Enter Witch Space by choosing a hyperspace system, launching, pausing the game, pressing the F key, restarting and then hyperspacing. Switch on the cloaking device just before you go into hyperspace then destroy all but one Thargon.

4 Switch off the cloaking device and wait until Tharglets appear. Destroy Thargon and collect Tharglets.

5 Repeat this until you feel you have enough alien items, or are in danger of getting killed.

6 Enter normal system and abandon ship using escape pod. When you get your new ship you'll have a 35-ton cargo bay plus the alien items. Sell these and you can use the extra cargo space. This will disappear if you have to use the escape pod and aren't carrying alien items, but you can always repeat the process.

### Batman

It's the original classic isometric game we're talking about here, again for the tape version, for infinite, well, just about everything, really:

```
IAAF 10·DATA·21,90,1c,36,00,c3,00,01,21,2d,22
IANB 20·DATA·36,d3,21,40,20,11,40,00,01,f2,01

FAHE 70·FOR·x=&BE00·TO·&BE34
CAJE 80·READ·a$
```

```
EAXM 90·POKE·x,VAL("&" + a$)
BAAP 100·NEXT
CAGB 110·LOAD""
DAAA 120·CALL·&3A6A
DABF 130·LOAD"!",&2040
DAGA 140·CALL·&BE08
```

### Gauntlet

Here's a dead simple one for owners of the original tape version of this wonderful two-player romp-em-up. All you have to do is complete the first set of levels, so that the next levels begin to load from tape. When you've managed this, simply fast forward your tape for a few seconds – when the levels are loaded, the program doesn't check that they're the levels they were

Somehow, somewhere, sometime, your Multiface is going to save the day.

### The lazy geek's ultimate labour saving device – the Multiface

You see, the one utility for the CPC that was created for the sole purpose of cheating is the Multiface. The idea of the little black (and white and red) box is simple – you can freeze the CPC at any point, and examine or alter the contents of memory. This makes it the perfect accomplice for poking games. So, our 'Tip Of The Feature' is, if you want an easy life, buy a Multiface. They cost £34.95 and are available from Romantic Robot, 54 Deanscroft Avenue, London NW9 8EN ☎ 081 200 8870.

### Secret CodeMasters

Here's a mind-blowingly simple one for owners of early CodeMasters games. On quite a few of them, try holding down the keys 6, A and P and the odds are that you'll have activated a cheat mode. Why they didn't feel the need to change the keys is pretty obvious (here's a clue – games that work with this cheat were written by Andrew and Philip Oliver).

The Oliver Twins so lazy they only came up with one cheat for all their games.

```
HAOJ 260·DATA·e1,12,23,13,0b,3a,fc,be
IAGE 270·DATA·c6,0a,cb,ff,32,fc,be,78
HAIH 280·DATA·b1,20,e7,c9,00,3e,ff,77
FANG 290·DATA·f6,ff,c9,xx
```

### Starquake

You might be interested to know all the teleport codes (go on you are really): TALIS, QUORE, ANGLE, UPAZZ, SNODY, ZODIA, ELIXA, VOREX, ASCIO, AMBOR, KRYZL, RALIQ, INDOL, DULON and OPTIK.

### Cybernoid

Another simple one for lovers of the Cecco classic – simply define the keys as Y, X and S, redefine the keys as you like them, and start the game. You should have infinite lives!

### Batman The Movie

Hold down keys D, E, 2, O, and 9, and you will be progressed to the next level.

Did you know that Mark Hamill is the voice of the Joker in the Batman cartoon series?

### Head Over Heels

It's amazing! Unfortunately, we haven't bagged it for the covetate just yet, but we're working on it even as you read this. This is entirely beside the point now, so let's get on with a cheat for infinite lives on the tape version:

DACJ 10·MEMORY·&39AE

```
CAME 20·x=&BE80
CAEE 30·READ·a$
EAAF 40·WHILE·a$ <> "xx"
EAGM 50·POKE·x,VAL("&" + a$)

IAEK 250·DATA·fc,be,7e,e5,21,fc,be,ae
```

### NZ Story

By typing FLUFFY slowly on the title screen, you should get infinite lives, and by pressing the large ENTER key, you'll progress to the next level.

### Spindizzy

To get to a secret sub bit within the game, load it up, and when the title screen is displayed, hold down the F and X keys for a section called Stix.

Spindizzy was written by a Hawkwind fan and there are clues to this fact in the game.

### Stormlord

Anyone having trouble with yet another Cecco masterpiece should type BRING ON THE GIRLS (without spaces) on the title screen and hear a little jingle, then pressing one to four to play that level with infinite lives.

## THE EASY LIFE

# Serious software

The mag that helps you work, rest and play  
reveals how to make the work bit less of a chore...

## General tips

**Standard grids** A little bit of effort in setting up standard grids when you're word processing can save you loads of time and effort later on. For example, you write loads of letters, set yourself up a grid which has your address in the top right corner, a 'Dear....' at the start of the letter and:

'Yours faithfully/sincerely,  
John Smith (or whatever your name is),'  
at the bottom. Then save this as a file.

When you want to write a letter you then just have to boot your word processor and load up your standard letter file, type in your letter without having to bother with the address, and deleting either the faithfully or sincerely as relevant. When you save the letter give it a different name so that your original letter grid will be intact and ready for use another time.

This same principle can be used for databases and spreadsheets; if there are standard elements you want on new grids, save a template grid.

**A matter of taste** It's important to have your word processor, database or spreadsheet tuned to your tastes. This makes life easy and production a lot faster. Things such as choice of colours and key combinations may seem trivial, but if you constantly use a package trivial irritations can mount into major annoyances.

**Storing phrases** When you're using a word processor it is handy to have often-used phrases or sequences of control codes available at the touch of a single key. This effect can be implemented using BASIC's KEY command. For example, try entering this line:

```
24 Key 0, "Amstrad Action"+CHR$(13)+"  
Future Publishing Ltd"+CHR$(13)+"30  
Monmouth Street"+CHR$(13)+"Bath"+  
CHR$(13)
```

## OCP Art Studio

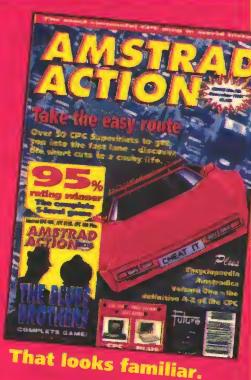

- For anyone whose OCP Art Studio irritatingly crashes (as all software can) at really inconvenient times, the version of the screen that would be recalled if UNDO is used is stored in bank &c5, and will therefore survive a soft reset. You can therefore restore screens with the following program:

```
10 MEMORY &3FFF  
20 OUT &7F00,&C5  
30 SAVE "restored.ser",b,&c000,&4000
```

- First off, there's the magnify option. Many people (especially those who have to live life without a mouse) will find it a constant pain to continually slide the cursor around the screen just to shift the magnification box a tad to the right, or whatever. This is no longer necessary,

## And of course...

The best tip of all is 'buy Amstrad Action every month'. It's always packed with advice that'll make using your CPC a whole lot easier. In fact, you're best bet would be to subscribe (see page 56) so you never miss a copy.

That looks familiar.

This will enable you to call up our address just by pressing Function Key 0. CHR\$(13) is the ASCII code for end-of-line.

You can assign whatever strings you like to each of the 32 Function Keys (remember that you can use SHIFT plus and Function Key and CONTROL plus a Function Key). None of the strings can contain over 120 characters, though.

**Screen printing** A dead handy, and short, listing that dumps all on-screen text to a printer:

```
10 POKE &BB5A,&C3  
20 POKE &BB5B,&2B  
30 POKE &BB5C,&BD
```

**Disk cataloguing** Keeping track of what's on your disks can be a bit of a chore, but this should make things less of a hassle:

- Switch on your printer and enter Print #8, CHR\$(27)+"A"+CHR\$(5)+CHR\$(27)+"M"+CHR\$(15) in direct mode.
- Enter CP/M, type DIR, hit Control P and press Return.
- After printing press Control P.

What should come out of the printer is a directory of the disk in condensed print - the perfect size for a disk label.

**It may be obvious, but...** When you're setting up a database always remember that the lengths you specify for strings directly affects the amount of records you can store altogether - the shorter the strings, the more records you can fit in memory at once.

## Protext

- When using Protext, you'll almost undoubtedly use different rulers (the bits setting up page width, tabs, etc). It really does make sense to construct several individual files with a ruler in each, and use the block load command to insert a ruler into the text.
- We've found a method of killing that irritating flashing cursor. All you have to do is POKE the number &c9 into address &BB7E. Simple, really. If you have the disk version, you'll do this by altering the DISC2 program to contain the line:

75 POKE &BB7E,&C9

## Tasword

- There are times when you don't want pairs or sets of words to be split over two separate lines - names of roads or people for example. To stop this happening you need to insert a hard space so the program thinks that two words are, in fact, one (there are other ways but this is by far the simplest and simplest is what this feature is all about, after all). In Tasword this is achieved by typing in the first word, pressing CONTROL and then typing in the space and your second word.

- POKEs for a word processor? Believe it or not, yes. What are they, though? Well, there are four addresses to examine:

```
6632 – page number header space  
6633 – header text space  
6634 – footer text space  
6635 – page number footer space
```

You can alter the values at these addresses to give yourself more or less space.

## BooTracker

Always use BooTracker to construct musical files for your programs. Actually, to be honest, it pales in comparison to stuff like Soundtraker, but I wrote it, so it's fab (I knew I shouldn't have let Simon loose with this feature - Dave).

# WAREHOUSE CLEARANCE!

## AMSTRAD GAMES CARTRIDGES

### FOR THE 6128+/464+/GX4000

#### WE ARE ABLE TO OFFER THE FOLLOWING GAMES CARTRIDGES AT

#### A SPECIAL OFFER PRICE OF £9.99 (WHILE STOCKS LAST):-

# THE AWARD WINNERS...

First disk drives for the CPC464/464+. Includes 3.5" disk drive, DDI-1 interface, connecting cables, power supply and utility software. The complete PLUG IN & GO solution. Full instructions and 12 months guarantee. Only £159.99. Please state 464 or 464+ when ordering.

## FREE Multiface II

for transferring all your tapes onto disk (worth £35) if ordered before 1/1/94

Winner of the Best Disk Drive award,  
*Amstrad Action July '93*

3.5" Second disk drives for the CPC464/664/6128. Top quality 'Panasonic' 3.5" drive mechanism, includes power supply, connecting cable, full 16 page manual, RAMDOS, RAMdisk & many more utilities. Format 800K per disk just like a PC, Amiga, Atari ST etc. The complete PLUG & GO solution.

SUPERB LOW PRICE, ONLY £64.99!!

# ROMDOS XL

Superb high capacity disk operating system available on ROM or complete in its own ROMBOX! Nothing else compares with these features:-

- Built in disk formatter
- Very simple to use
- Built in file copying/erasing
- Uses no user memory
- Full 19 page printed manual
- Auto detects format
- 464/664/6128 compatible

ROM version only £24.99

Complete in ROMBOX only £39.99

Winner of the Best Disk Operating System award, *Amstrad Action July '93*

## ALSO AVAILABLE...

3.5" Blank Disks

Only £7.50 for 10

HACKIT - excellent Award Winning hacker/machine code programming cartridge.

Only £24.99

PC-TRANS - transfer files from a CPC to a PC and vice versa.

Only £24.99

RS232 Serial Interface - can be used to connect the CPC to another computer, modem, serial printer etc. Ideal for use with Amstrad NC100/200 (connecting cable available priced £9.99). Includes built in ROM software. NEW LOW PRICE £29.99

Please add £5.00 postage and packing to all disk drive orders. Other orders please add £1.00. All major credit cards accepted. Immediate despatch for credit card orders.

# Basic instincts

If you're a complete programming novice you need to start with the BASICs (bad programming joke - Ed) in which case Sentinel's latest batch of tutorial booklets are worth checking out. Simon takes a PEEK (does that even qualify as a joke? - Ed).

**R**obin Gilbert, it seems, is a man with a mission - to make the world computer literate. A while back he wrote a series of Machine Code tutorials, the review of which you can find in issue 91. Then he wrote a couple more tutorials, covering demo programming and sprite manipulation, which we reviewed last issue. There ends the saga of the Machine Code tutorials. But not our story...

Following the storming success of these booklets, Sentinel (who started selling them as opposed to Pipeline Software, the original

Dave would like to point out that it is not him in this photo. He'd like to but he can't, because it is him. Hah! Exposed!

## So what's in it for me?

So why should you want to learn Basic? Could it be perhaps that:

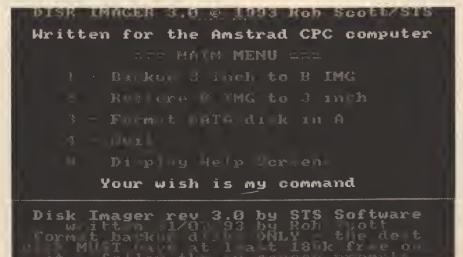

- 1 It's incredibly easy to learn.
- 2 The rules of the language are universal across every computer that can run Basic (which is nearly all of them).
- 3 Easier to debug than Machine Code.
- 4 It's just complicated enough to make you look clever... (I like the sound of that - Dave).
- 5 ...but it's simple enough so that you don't have to be (definitely sounds like my kind of language - Dave).

# Packin' 'em in

Four disks in one! That's what you'll end up with if you use Disc Imager. Er, great... why? Ah-ha, that's what Simon's just about to reveal.

**T**he idea behind this type of package is almost completely a cost-saving one, as a reaction to both the ludicrous price and falling availability of 3-inch disks in relation to 3.5-inch disks (the industry no longer manufactures 3-inch disks). Disc Imager enables you to store all the data from a 3-inch disk as a single file on an 800K 3.5-inch disk. This means that you can archive four disks on to one, spending about 50p on a 3.5-inch disk as opposed to £12 on four normal disks.

So how does Disc Imager compare with SDA, the package from SafeSoft which we

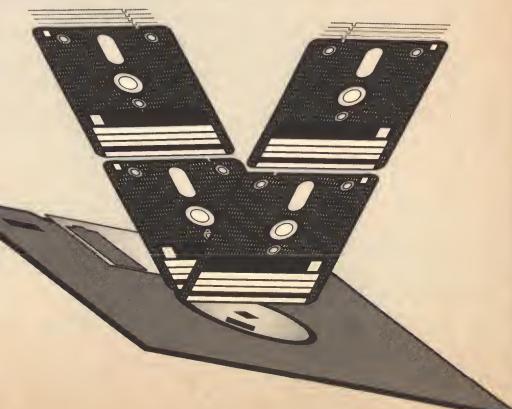

It took me a whole week to come up with a Disc Imager gag that fitted into a caption, and in the end I ran out of space anyway.

reviewed in issue 94? Well, I ran a simple little benchmark test which involved archiving my work disk using both packages. The original disk held 120K of data.

**Compression:** The first thing you'll notice is that Disc Imager does not compress the disk, causing the destination file to be 180K, as opposed to the more stomachable 142K that SDA produced.

**Formats:** Whereas SDA copes with both data and system formats, Disc Imager only likes data formatted disks. Disc Imager does have a built-in formatter, though.

**Encryption:** Disc Imager will automatically encrypt archived files, the only problem being that the XOR code is neither displayed or requested, so anyone can access encrypted files, providing they have a copy of the package. Point, please?

they become a little more familiar with the simpler commands of the language.

- **TP21, An Amateur's Guide:** If you thought you'd got to 'proficient', think again. This guide deals with more complex data structures, branched subroutines, external AMSDOS commands (buy it and find out), variable filing and basically all the slightly more complex bits that you'll need to know in order to progress.
- **TP22, Graphics Techniques:** What do you think? This time it's drawing, colouring text, blending text and graphics, shapes, palette animation techniques, defining user characters and just about everything else you could possibly do with graphics in BASIC.
- **TP23, File Handling:** This covers saving and loading information, binary and ASCII files, disk formats, and, well, filing really.

- **TP24, Writing Arcade Games In BASIC:** (Stifled giggle): Yes. Don't call us, we'll avoid you like the plague. *Writing Arcade Games In BASIC*. Yes. Techniques, and stuff. Yes.

- **TP25, Writing Adventure Games In BASIC:** Now this is more like it! Using a language that's fab at handling strings 'n' things to create a fabulous text adventure! Wow!

- (But we're doing all that stuff in AA anyway - Dave.)
- **TP26, Advanced Applications Programming:** Further techniques

Let's face it - if Dave can learn BASIC from these tutorials, anyone can.

```
BASIC 1.1
Ready
10 print "Hello";
20 goto 10
```

So that's what he's been up to. Dave, this was childish back in 1982.

The guides follow the usual format; each is around 30 A4 pages thick and stuffed full of programs, information tables and concisely written copy on every subject. Probably the only hassle with the guides is the font (lettering style) that the writers have used for the BASIC listings; it's not exactly very easy to read (perhaps we should send them a copy of our CPC font).

From a beginner's point of view, these guides are excellent. The first three act as a very gentle introduction to both the technicalities and the theory of BASIC programming, with the final guides giving helpful and incredibly detailed information on the various aspects and specialised uses of the language.

In short, if you want to learn BASIC programming and the stuff we do in AA doesn't go deep enough quickly enough, these are the books for you. Working at your own speed is always a good idea when learning stuff like a new language, and these books let you do that.

Each book costs £3 which works out at 10p per page. If you think this is a little steep, think again. Each title is well worth the money; they're brilliant examples of quality over quantity. **Simon**

## Details

**PRODUCT:** Basic Tutorial Booklets  
**PRICE:** £3 each.  
**AVAILABLE FROM:** Sentinel Software, 41 Enmore Gardens, East Sheen, London SW14 8RF  
081 876 7032.

**External Media**  
3.5" 80 track Disk Drive  
5.25" 80 track disk drive  
RMDOS (XL) disk operating system (80 track double sided format)  
XEXOR disk operating system (80 track double sided format)  
SDOS disk operating system (80 track single sided format)

If you wish you use SDOS or MSBOS 80 track single sided formats, then you will only be able to store 2 images on the disk, unless you have a side switch on your disk drive.

**Features**  
\* Store 4 sides of a 3" disk safely and reliably on RMDOS 5.25 80track or RMDOS 3.5" 80 track disks  
\* Image Encrypting option for protecting sensitive data  
\* Source d

**So in the end, you see, I had to leave it out completely - what a downer, to be sure.**

When it comes to the crunch, I reckon that SDA is the better package, but frankly, I wouldn't bother buying either. Cynical? Not at all. It's just that we're planning to one or the other on the cover tape in the next couple of months. So sit tight, and soon all your storage problems could be a thing of the past (probably). **Simon**

**PRODUCT:** Disc Imager  
**PRICE:** £10 (disk only)  
**AVAILABLE FROM:** STS Software, 10 Lakin Drive, Barry, South Glamorgan, CF6 5AH  
0446 746920.

# From ASCII to Zap

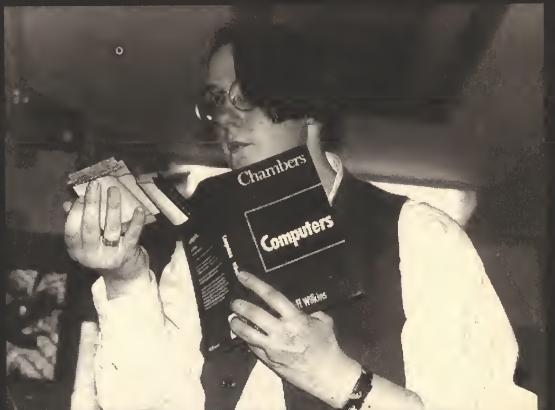

Making Sense of English in Computers

Geoff Wilkins

For those of you viewing in black and white this cover is a deep red with blue and white highlights.

level for you, but I reckon you might have to do quite a bit of cross-referencing if you're a complete computer novice.

The range of entries is comprehensive and there seem to be no major omissions, though

In trials three out of three Amstrad Action writers said they preferred Chambers' Making Sense of English in Computing to any other cat food.

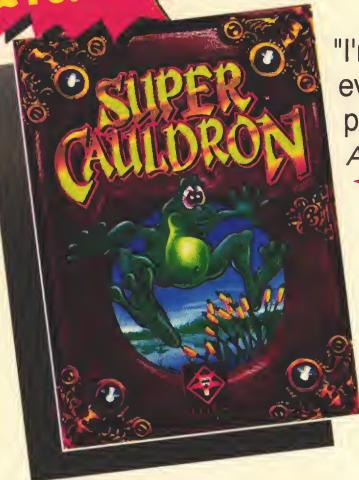

don't expect in-depth explanations of error codes or the like. Though there's a bias towards PCs most of the entries are applicable across all formats. It's not a guide to computing, so don't think you'll pick Making Sense up and learn everything you need to know from scratch. But if you're a relative newcomer to computing it's a useful book to have around. **Simon**

### STAR COMMAND

Earth is under attack from a vast fleet of alien space craft. An Earth scout vessel has been confronted and destroyed! The alien fleet is known to be under the command of either a traitorous human, or a powerful Amstrad CPC computer. Earth can only be saved with the help of a Star Commander. He/she will have to use the advanced 1 or 2 player command system STAR COMMAND, which can even give commands to automatically pursue and destroy selected craft. BUY IT NOW - BEFORE IT'S TOO LATE!

### HORSIN' AROUND

#### PUNTERS EDITION

This is the ultimate bedding simulation. Features include:

- Up to 6 players
- Excellent race graphics
- From quarter-mile track to 1 mile
- 6 ways to be first, 1st, 2nd, 3rd, 4th, 5th
- Race, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21, 23, 25, 27, 29, 31, 33, 35, 37, 39, 41, 43, 45, 47, 49, 51, 53, 55, 57, 59, 61, 63, 65, 67, 69, 71, 73, 75, 77, 79, 81, 83, 85, 87, 89, 91, 93, 95, 97, 99, 101, 103, 105, 107, 109, 111, 113, 115, 117, 119, 121, 123, 125, 127, 129, 131, 133, 135, 137, 139, 141, 143, 145, 147, 149, 151, 153, 155, 157, 159, 161, 163, 165, 167, 169, 171, 173, 175, 177, 179, 181, 183, 185, 187, 189, 191, 193, 195, 197, 199, 201, 203, 205, 207, 209, 211, 213, 215, 217, 219, 221, 223, 225, 227, 229, 231, 233, 235, 237, 239, 241, 243, 245, 247, 249, 251, 253, 255, 257, 259, 261, 263, 265, 267, 269, 271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291, 293, 295, 297, 299, 301, 303, 305, 307, 309, 311, 313, 315, 317, 319, 321, 323, 325, 327, 329, 331, 333, 335, 337, 339, 341, 343, 345, 347, 349, 351, 353, 355, 357, 359, 361, 363, 365, 367, 369, 371, 373, 375, 377, 379, 381, 383, 385, 387, 389, 391, 393, 395, 397, 399, 401, 403, 405, 407, 409, 411, 413, 415, 417, 419, 421, 423, 425, 427, 429, 431, 433, 435, 437, 439, 441, 443, 445, 447, 449, 451, 453, 455, 457, 459, 461, 463, 465, 467, 469, 471, 473, 475, 477, 479, 481, 483, 485, 487, 489, 491, 493, 495, 497, 499, 501, 503, 505, 507, 509, 511, 513, 515, 517, 519, 521, 523, 525, 527, 529, 531, 533, 535, 537, 539, 541, 543, 545, 547, 549, 551, 553, 555, 557, 559, 561, 563, 565, 567, 569, 571, 573, 575, 577, 579, 581, 583, 585, 587, 589, 591, 593, 595, 597, 599, 601, 603, 605, 607, 609, 611, 613, 615, 617, 619, 621, 623, 625, 627, 629, 631, 633, 635, 637, 639, 641, 643, 645, 647, 649, 651, 653, 655, 657, 659, 821, 823, 825, 827, 829, 831, 833, 835, 837, 839, 841, 843, 845, 847, 849, 851, 853, 855, 857, 859, 861, 863, 865, 867, 869, 871, 873, 875, 877, 879, 881, 883, 885, 887, 889, 891, 893, 895, 897, 899, 901, 903, 905, 907, 909, 911, 913, 915, 917, 919, 921, 923, 925, 927, 929, 931, 933, 935, 937, 939, 941, 943, 945, 947, 949, 951, 953, 955, 957, 959, 961, 963, 965, 967, 969, 971, 973, 975, 977, 979, 981, 983, 985, 987, 989, 991, 993, 995, 997, 999, 1001, 1003, 1005, 1007, 1009, 1011, 1013, 1015, 1017, 1019, 1021, 1023, 1025, 1027, 1029, 1031, 1033, 1035, 1037, 1039, 1041, 1043, 1045, 1047, 1049, 1051, 1053, 1055, 1057, 1059, 1061, 1063, 1065, 1067, 1069, 1071, 1073, 1075, 1077, 1079, 1081, 1083, 1085, 1087, 1089, 1091, 1093, 1095, 1097, 1099, 1101, 1103, 1105, 1107, 1109, 1111, 1113, 1115, 1117, 1119, 1121, 1123, 1125, 1127, 1129, 1131, 1133, 1135, 1137, 1139, 1141, 1143, 1145, 1147, 1149, 1151, 1153, 1155, 1157, 1159, 1161, 1163, 1165, 1167, 1169, 1171, 1173, 1175, 1177, 1179, 1181, 1183, 1185, 1187, 1189, 1191, 1193, 1195, 1197, 1199, 1201, 1203, 1205, 1207, 1209, 1211, 1213, 1215, 1217, 1219, 1221, 1223, 1225, 1227, 1229, 1231, 1233, 1235, 1237, 1239, 1241, 1243, 1245, 1247, 1249, 1251, 1253, 1255, 1257, 1259, 1261, 1263, 1265, 1267, 1269, 1271, 1273, 1275, 1277, 1279, 1281, 1283, 1285, 1287, 1289, 1291, 1293, 1295, 1297, 1299, 1301, 1303, 1305, 1307, 1309, 1311, 1313, 1315, 1317, 1319, 1321, 1323, 1325, 1327, 1329, 1331, 1333, 1335, 1337, 1339, 1341, 1343, 1345, 1347, 1349, 1351, 1353, 1355, 1357, 1359, 1361, 1363, 1365, 1367, 1369, 1371, 1373, 1375, 1377, 1379, 1381, 1383, 1385, 1387, 1389, 1391, 1393, 1395, 1397, 1399, 1401, 1403, 1405, 1407, 1409, 1411, 1413, 1415, 1417, 1419, 1421, 1423, 1425, 1427, 1429, 1431, 1433, 1435, 1437, 1439, 1441, 1443, 1445, 1447, 1449, 1451, 1453, 1455, 1457, 1459, 1461, 1463, 1465, 1467, 1469, 1471, 1473, 1475, 1477, 1479, 1481, 1483, 1485, 1487, 1489, 1491, 1493, 1495, 1497, 1499, 1501, 1503, 1505, 1507, 1509, 1511, 1513, 1515, 1517, 1519, 1521, 1523, 1525, 1527, 1529, 1531, 1533, 1535, 1537, 1539, 1541, 1543, 1545, 1547, 1549, 1551, 1553, 1555, 1557, 1559, 1561, 1563, 1565, 1567, 1569, 1571, 1573, 1575, 1577, 1579, 1581, 1583, 1585, 1587, 1589, 1591, 1593, 1595, 1597, 1599, 1601, 1603, 1605, 1607, 1609, 1611, 1613, 1615, 1617, 1619, 1621, 1623, 1625, 1627, 1629, 1631, 1633, 1635, 1637, 1639, 1641, 1643, 1645, 1647, 1649, 1651, 1653, 1655, 1657, 1659, 1661, 1663, 1665, 1667, 1669, 1671, 1673, 1675, 1677, 1679, 1681, 1683, 1685, 1687, 1689, 1691, 1693, 1695, 1697, 1699, 1701, 1703, 1705, 1707, 1709, 1711, 1713, 1715, 1717, 1719, 1721, 1723, 1725, 1727, 1729, 1731, 1733, 1735, 1737, 1739, 1741, 1743, 1745, 1747, 1749, 1751, 1753, 1755, 1757, 1759, 1761, 1763, 1765, 1767, 1769, 1771, 1773, 1775, 1777, 1779, 1781, 1783, 1785, 1787, 1789, 1791, 1793, 1795, 1797, 1799, 1801, 1803, 1805, 1807, 1809, 1811, 1813, 1815, 1817, 1819, 1821, 1823, 1825, 1827, 1829, 1831, 1833, 1835, 1837, 1839, 1841, 1843, 1845, 1847, 1849, 1851, 1853, 1855, 1857, 1859, 1861, 1863, 1865, 1867, 1869, 1871, 1873, 1875, 1877, 1879, 1881, 1883, 1885, 1887, 1889, 1891, 1893, 1895, 1897, 1899, 1901, 1903, 1905, 1907, 1909, 1911, 1913, 1915, 1917, 1919, 1921, 1923, 1925, 1927, 1929, 1931, 1933, 1935, 1937, 1939, 1941, 1943, 1945, 1947, 1949, 1951, 1953, 1955, 1957, 1959, 1961, 1963, 1965, 1967, 1969, 1971, 1973, 1975, 1977, 1979, 1981, 1983, 1985, 1987, 1989, 1991, 1993, 1995, 1997, 1999, 2001, 2003, 2005, 2007, 2009, 2011, 2013, 2015, 2017, 2019, 2021, 2023, 2025, 2027, 2029, 2031, 2033, 2035, 2037, 2039, 2041, 2043, 2045, 2047, 2049, 2051, 2053, 2055, 2057, 2059, 2061, 2063, 2065, 2067, 2069, 2071, 2073, 2075, 2077, 2079, 2081, 2083, 2085, 2087, 2089, 2091, 2093, 2095, 2097, 2099, 2101, 2103, 2105, 2107, 2109, 2111, 2113, 2115, 2117, 2119, 2121, 2123, 2125, 2127, 2129, 2131, 2133, 2135, 2137, 2139, 2141, 2143, 2145, 2147, 2149, 2151, 2153, 2155, 2157, 2159, 2161, 2163, 2165, 2167, 2169, 2171, 2173, 2175, 2177, 2179, 2181, 2183, 2185, 2187, 2189, 2191, 2193, 2195, 2197, 2199, 2201, 2203, 2205, 2207, 2209, 2211, 2213, 2215, 2217, 2219, 2221, 2223, 2225, 2227, 2229, 2231, 2233, 2235, 2237, 2239, 2241, 2243, 2245, 2247, 2249, 2251, 2253, 2255, 2257, 2259, 2261, 2263, 2265, 2267, 2269, 2271, 2273, 2275, 2277, 2279, 2281, 2283, 2285, 2287, 2289, 2291, 2293, 2295, 2297, 2299, 2301, 2303, 2305, 2307, 2309, 2311, 2313, 2315, 2317, 2319, 2321, 2323, 2325, 2327, 2329, 2331, 2333, 2335, 2337, 2339, 2341, 2343, 2345, 2347, 2349, 2351, 2353, 2355, 2357, 2359, 2361, 23

 Does this mean you won't be considering any more European titles in future?

Oh no. If anything comes our way, we'll definitely consider it, we'll just be looking a little more carefully in future.

**So, Richard, what have Sentinel got coming up for us?**

At the minute, there's nothing else actually ready for release, but we've got a few bits and pieces in the pipeline.

**So you will be willing to view titles from hopeful programmers?**

Oh yes, but not just finished packages. If anyone has anything they think we'd be able to use, be it an idea, a routine, or anything, we want to speak to them.

**Okay then, what's your attitude towards the CPC market in general?**

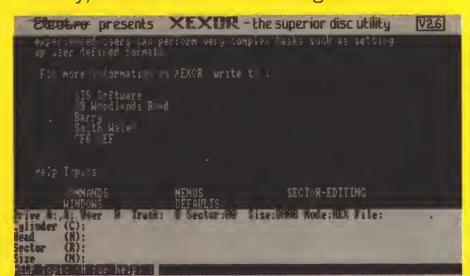

We can't deny that it's quite obviously declining, but Sentinel Software will continue to support it. We also support fanzines, mainly CPC User and WACCI.

**And so who are your target audience?**

We don't really aim at one particular ability group – anyone with a CPC can find something we're selling that they'll enjoy and find easy to use.

**And the type of software you aim for?**

Again, we don't really have any target – more recently, we've been concentrating on serious

This is Xexor, probably the most powerful disk utility in the world. Great – what the hell am I supposed to do with the rest of this caption?

software, but Ball Bearing and The Undersea Adventure (still undergoing work) look set to swing the balance again.

**When is Undersea Adventure due out?**

We're hoping to get it finished within the next month, but we can't really make any firm guarantees about release dates just yet.

I'm also planning some new tutorials, following in the same line as our existing range (see the review on page 14 – Dave).

**Campursoft have just released ProPrint on ROM. Do you have any plans to follow suit?**

Frankly, we took a look at the situation, and it just didn't seem feasible.

**So you don't feel like you're in direct competition with anyone?**

No, not really. The more software houses that appear on the scene, the better it is for the life of the machine; it's healthy competition that sorts

**Soundtrakkerv received an absolutely wonderful mark from Tim Norris, who sat around for hours creating loads of tunes.**

out the good quality software from the lot that people would release otherwise.

**How do you feel about the STS split (reported last month, folks – Dave)?**

It is a shame it had to happen, but if it means more software for the CPC and a bit more healthy competition, good luck to them. I'm currently selling Xexor (Quantum's first release – a disk utility), and if anything comes along by STS, I'd look into selling that as well.

**So do you have any plans to branch out?**

We're looking into covering the PC market, but even if we manage that, we'll still be giving plenty of support for CPC users; we won't slow down on that front.

**What about other plans have you got within the CPC market?**

We're not only a software house, anyway – I think the excellent reviews that the tutorials have received back up that fact quite adequately. We're not planning to do anything on the hardware side, though. Incidentally, I will be contributing to Better Than Life, the new disk fanzine that Richard Fairhurst is setting up.

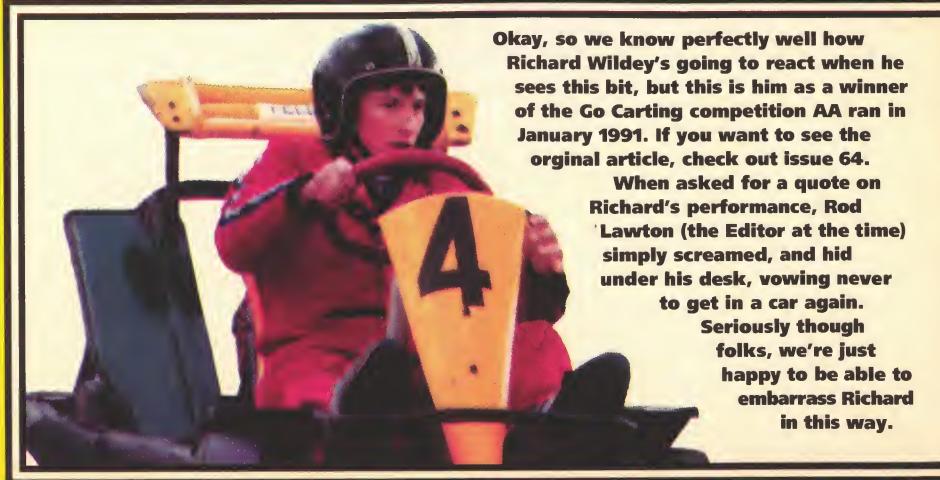

**Okay then Richard, you've got the one-time only chance to blatantly plug the title of your choice – go for it.**

I think Pro-Ext is definitely worth a mention – we've modified the package to get it working with disk version of Protext, and added a lot of new features, such as a font editor, and a charting module (for printing bar charts and pie charts).

Thanks Richard Wildey, and good luck and all the best in the future.

Okay, so we know perfectly well how Richard Wildey's going to react when he sees this bit, but this is him as a winner of the Go Carting competition AA ran in January 1991. If you want to see the original article, check out issue 64.

When asked for a quote on Richard's performance, Rod Lawton (the Editor at the time) simply screamed, and hid under his desk, vowing never to get in a car again. Seriously though folks, we're just happy to be able to embarrass Richard in this way.

## The Sentinel stock list

So what have Sentinel got on the market at the minute? Let's take a look:

• ZapTBalls – A Pang clone that received 85 per cent in issue 89.

• Soundtrakkerv – The excellent 93 per cent of issue 92.

• Pro-Ext – A Protext enhancer that unfortunately was just pipped to the post by Campursoft's ProPrint in issue 95.

• TUSS – The sprite searcher reviewed last month.

• Xexor – An excellent disk utility package, coded by Quantum, reviewed in issue 96.

• SmArt Plus – Rob Buckley's art package for the Plus range, reviewed in issue 95.

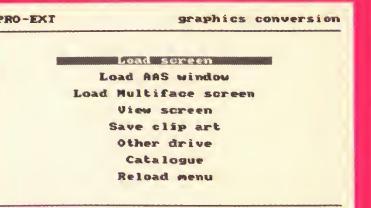

• Ball Bearing – The bouncing balls game of last issue, scoring an unfortunate 40 per cent.

• Coding Tutorials – They've been around for absolutely aeons, and are all absolutely fabulous. Send off to Sentinel for a complete list right now!

# DIY shoot-'em-ups

If you can't beat 'em, write 'em. Knocking out games will soon be easier than ever thanks to the soon-to-be-released Zack. Simon Forrester checks out the work in progress.

**T**he most powerful utility ever to hit the CPC". So claim Quantum.

But then they would. They're releasing the darned thing. But what 'thing' is it? What could possibly deserve such hyperbole? Zack Construction Kit, that's what, an arcade game creation package, a package which'll take the hard labour out of writing games.

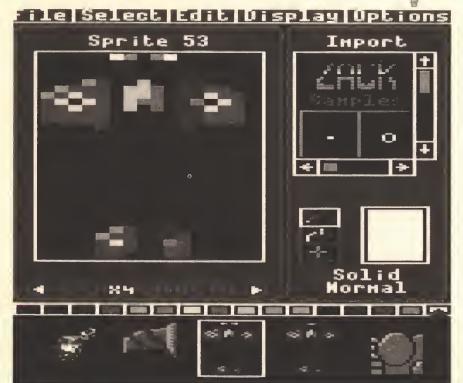

So far we've only seen an unfinished version of the package, but it's such an intriguing idea, we thought we'd bring you an in-progress report.

## It's a game creator of two halves (and a couple more)

The main game creator is split into four parts:

- The Graphics Editor** – Offering art features that rival packages like OCP Art Studio, Zack enables you to design sprites, background layouts, consoles ('console' being the package's buzz word for the panel where your score is displayed) and character sets (lettering, to you and me). It also has a facility which allows you to draw a sprite from various angles or in various states (ie, whole or half shot away) then group them as an object block; you can then define how the sprite should look at various points in the game.

This part of the package is both powerful and easy to use, but so far it looks as if provision has only been made for games running in mode 0, which, I feel, is a mistake. There will be the occasional game

You may think brilliant graphics like this take absolutely ages to draw; they don't, provided you've got a bit of artistic flair.

that would sit a lot more comfortably in a higher resolution mode, despite the more limited choice of colours – Myth thrived under these circumstances.

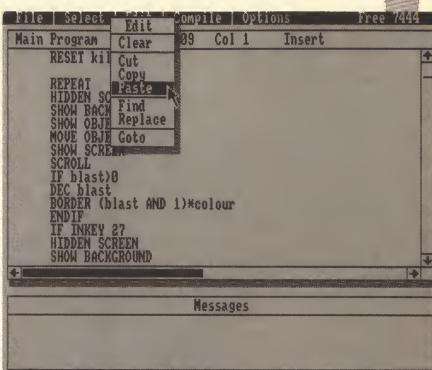

So now we've got our game drawn (with an astounding leap of effort justified by artistic licence and a limited space on the page), what's next?

- Music/FX Creator** – Erm... Yeah. A slight problem here is that I haven't actually, in the sense of sitting in front of a machine and using

it, seen this part of the package yet. That's because it hasn't been written yet.

When someone does get around to writing it, though, the music/FX creator will be what you use to write your title tune and sound effects like explosions, bullets, death screams, killer cucumbers from the planet fish, etc. Pretty essential really, so let's hope the programmers make a good job of it.

**Program Editor** – It's here that all the magic happens (are you sure you haven't been watching too much Saturday

Here's the fab, funky text editor where you write such literary classics as, 'Game Over.'

and removing sprites as well as collision detection, sound and scrolling.

## The jury's still out

Now would normally be the point in the review where I give my verdict. Quantum Computing, and in particular Richard Wilson (who wrote the package) should be getting nervous at this bit, with beads of sweat trickling down their temples. Which makes it a perfect opportunity to mash their brains by being a real jobsworth and saying, "This is a preview, so I can't make any judgements."

But I'm not that cruel. Today.

Bear in mind this is a preview, though, and there will be a final review when the product's complete. But from the standard of what I've seen so far, it looks like this package is going to be really rather stunning. Both the graphics and program editors are driven with a pointer and menu system, similar to that used in OCP Art Studio which is designed for joystick or keyboard control.

All in all, if you want to write games, this looks like it could be the package for you. Vehement non-programmers, stay away, because it's not just a case of drawing pretty pictures; you do actually have to write a core game program, even though it's in a fairly easy-to-understand language.

To sum up, then, this looks like it could well be among the more powerful and well-written utilities on the CPC. Whether it's the all-time best is another matter, as that really is a pretty big claim to live up to.

Simon

## And here's one I made earlier

Here's a game they knocked together with the package – it's, erm, a bit nob really, but with a copy of ZACK you could easily do better (sorry, Quantum).

# Assembly Line

We all live in a yellow subroutine, a yellow subroutine, a yellow subroutine... You know, the further Simon gets through this beginners' programming series, the further away he gets from the subject of bouncing balls. Oh well...

Partly as a follow-up to last month's gentle introduction to Machine Code, but mainly because of the several hundred people who, after reading it, rang me up with hours' worth of questions, I'm going to continue my sojourn into Machine Code tutoring with another gentle introduction, this time an introduction to program structure.

## Doing the splits

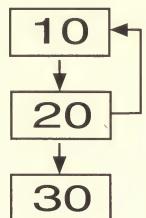

Let's start with the moron program that all the irritating kids type into the machines in WH Smith's on a bored Saturday afternoon:

```
10 PRINT "Hello"
20 GOTO 10
```

As you can see from the flowchart representing this program, it is just a straight loop, with line 10 performing a function, and line 20 sending the program back to line 10. What about a more complex program? What happens when a flow path splits? Let's consider this BASIC program:

```
10 FOR a=1 TO 200
20 NEXT a
30 CLS
```

Though it has no real practical use whatsoever (a bit like Dave really), it'll actually wait for a while (not very long at all), then clear the screen. Its flow chart is a little less straightforward.

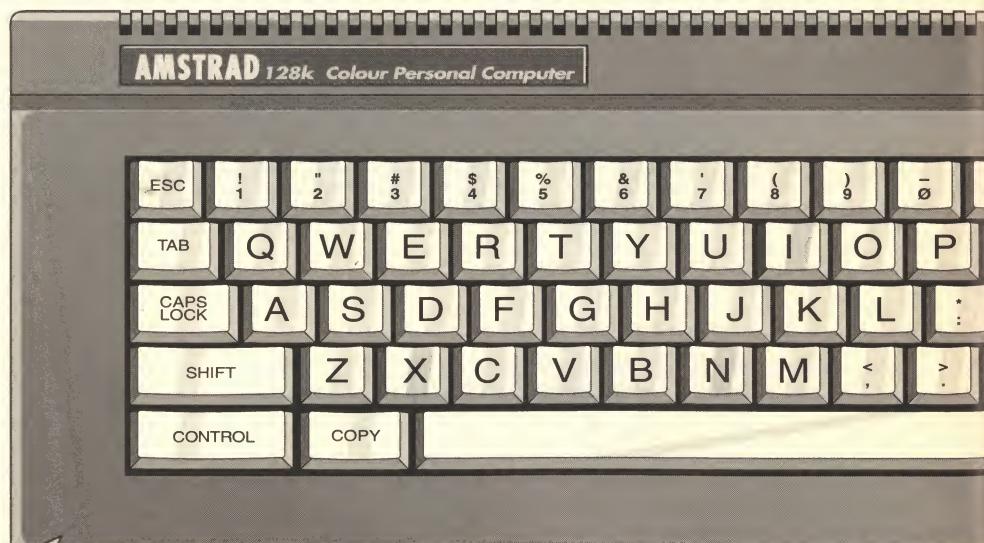

After line 10 has established a loop, line 20 either returns to line 10 (200 times) or lets the program run on to line 30.

But what with this being a Machine Code tutorial n'all, I suppose having a look at the Machine Code equivalent would be a good idea, so here it is in all its glory:

```
.loop :dec a
      cp 0
      jp nz,loop
      ld a,&0c
      call &bb5a
      ret
```

This bit does all the tidying up by clearing the screen and returning you to BASIC.

It's worth clearing up one other point – the **cp** command does not operate the way you might think it does if you've not experienced the command before. For instance, in the example

## KERBLAM!

We thought we'd better let all those who've just joined us for the first time this issue in on a few vital bits of Assembly info:

- ZAPP was an Assembler given away last issue.
- You'll need an Assembler to run Assembly programs like the Machine Code stuff printed in this section.
- If you're interested in all this coding stuff a good move would be to buy AA back issues from iSh 91 onwards.

And on a final note to all those of you who got hold of ZAPP Assembler and loved it to bits – please remember that when you see the line:

```
.loop::ld a,7
```

...you should enter:

```
.loop:ld a,7
```

...and let ZAPP insert the spaces to make sure it all tabulates neatly.

And there you have it – the same function in Machine Code. The really interesting bit here is the point at which the program could split.

Time for one of those line-by-line breakdowns:

```
ld a,200
```

Here you're simply loading the a register with the number 200.

```
.loop :dec a
```

It's at this point that the program takes one away from the contents of that register.

```
cp 0
```

Now the program checks whether the content of the a register has

above we compared a number with zero. What the **cp** command actually does is measure the difference between the number stated and the contents of the accumulator, the difference being expressed as either zero or non-zero (the **z** flag or the **nz** flag, the latter of which we have just seen in operation).

## If only it were that simple

There's no harm in running through this one more time, just to make sure you've got the hang of it. This time, though, let's deal with an **IF** statement, to expand our horizons a little:

```
IF a=10 THEN GOTO 100
```

And its Machine Code equivalent:

```
jp nz, label
```

Getting the hang of it now?

## Anyone flagging yet?

So far I've only dealt with one flag (well strictly speaking, two; **z** and **nz**). There are others, though, and you may have to use them in future. The other two really common states are **c** and **nc**, meaning carry and non-carry respectively. I can feel another IF statement coming on:

```
IF a>b THEN GOTO 100
```

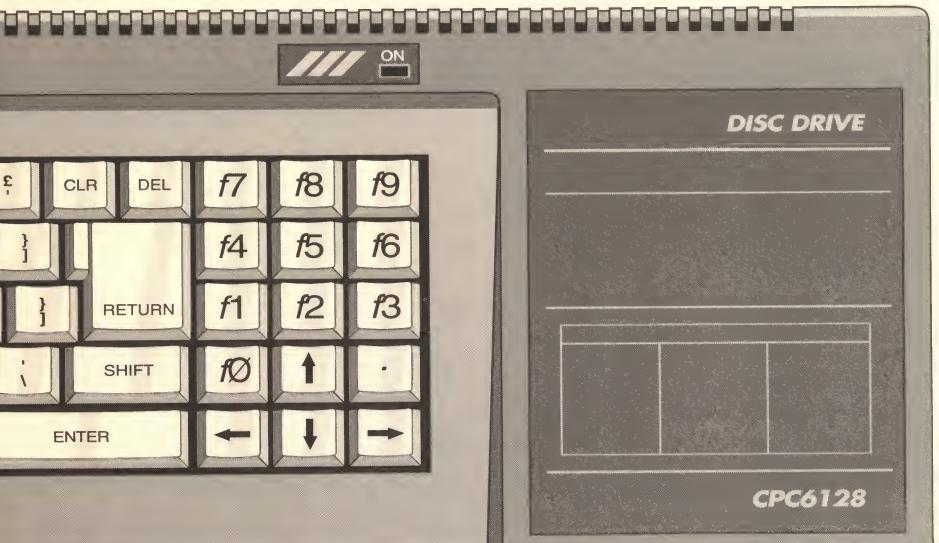

A direct Machine Code translation would be:

```
sub b
jp nc, label
```

I suppose I ought to explain what the carry flag is all about, really, hadn't I? (It's his organisation that I admire – Dave). Well, it's quite simple really. As you should be aware (and if you aren't order some Back Issues from page 25, you cheapskate), a single 8-bit register can hold an integer (whole numbers to you and me – Dave) from 0 to 255. If you carry out an operation (like subtract, as we've just done) on a register and the value goes above 255 then the routine will start counting from zero again (ie, 253, 254, 255, 0, 1, 2, etc); if the value goes below zero the routine will count down from 255 (ie, 2, 1, 0, 255, 254, 253, etc). And Dave, stop interrupting my paragraphs.

Stop panicking – I'll elucidate. If you take the number 250 and add nine, the result will be 3, as the value goes to 255 then through zero, one, and two. If this ever happens, the carry flag is set. If it doesn't happen, the non-carry flag is set.

```
jp loop1
ret
.loop1 :call loop2
ret
.loop2 :ld a,&0c:call &bb5a
ret
```

## Sub-culture

Next up, subroutines (something had to justify the hideous 'yellow subroutine' gag earlier)... Let's take a quick look at a BASIC program:

```
10 GOTO 30
20 END
30 GOSUB 50
40 END
50 CLS
60 RETURN
```

Okay, it's completely impractical, line 20 never gets used and you'd never need it, but how does it look theoretically? What would it look like in Machine Code, though?

## MACHINE CODE 23 Flags and what to do with them

Okay, okay, I know this stuff's not all that clear to the absolute beginner, so let's go through this just one more time.

Because Machine Code isn't highly structured enough to support complex commands like BASIC's IF command, every command, such as subtraction, addition, comparison and the like leaves its mark on flags.

These flags are simply little indicators that either contain 1 or 0. So if you had a routine that contained an addition

Typical. This is what you get when you tell an art editor to use his imagination.

which made the result carry over the top of a number scale (255), the carry flag would be set (it would show a 1). If the result didn't carry, the flag would not be set.

These flags can then be detected with commands such as **JP C**, which means 'if that last command did result in the carry flag being set, jump to the following address'. Dead simple!

One final thing – when you hear phrases like 'flow of operation', they're just referring to the way a program runs; the route it takes and where it goes. I just thought I'd mention that.

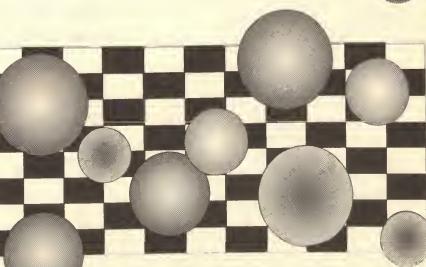

that mimics BASIC programs. Not only does it limit the ability of your work, but it begs the question, why are you bothering to convert it into Machine Code in the first place? You see, it's all very well to program in Machine Code, but if there wasn't actually any point in the first place, why have you bothered?

## Go with the flow

So now you know how to make a program flow. In most respects, the structure is identical to BASIC, but a lot more broken down (it can often take more than one Machine Code command to simulate a BASIC command).

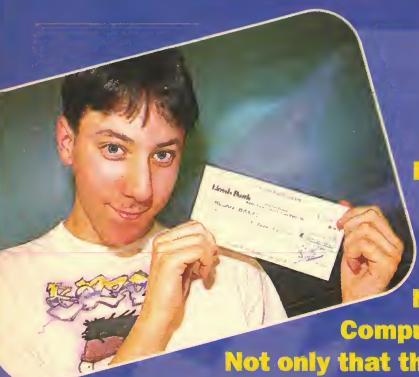

One the final point here, and it concerns you. Let's face it, I may as well give up with this bouncing ball game for the time being, and concentrate on what you want to know about. So if there's absolutely anything you'd like me to cover in future, send me your idea on the back of a postcard, and I'll see what I can do.

The only real restriction is my utter refusal to cover raster bars, because it just means we'll see about a thousand more irritating demos with rasters moving in the background – if anyone dares ask me how to program them, they'll be cited as an accomplice when my court case comes up, the one concerning my butchering of the nearest living thing when I got the request. You have been warned.

Warning: if you want to ask Simon what's happened to the bouncing ball program, think first – do you want a visit from a six-foot, seething, hairy ball of anger?

**COME AND HAVE A GO IF YOU THINK YOU'RE HARD ENOUGH**  
**To the victor... £10,000**

Remember this guy? Last year, Allan Brett became a celebrity overnight after he scooped the National Computer Games Championships.

Not only that though - as well as the glory, he also walked off with £10,000 IN HARD CASH.

Using outrageous skill, the 18-year-old from Hull managed to be the best on Sega, Nintendo and Amiga machines.

THIS YEAR THE GAMES CHAMP COULD BE YOU!

**FREE ENTRY!**

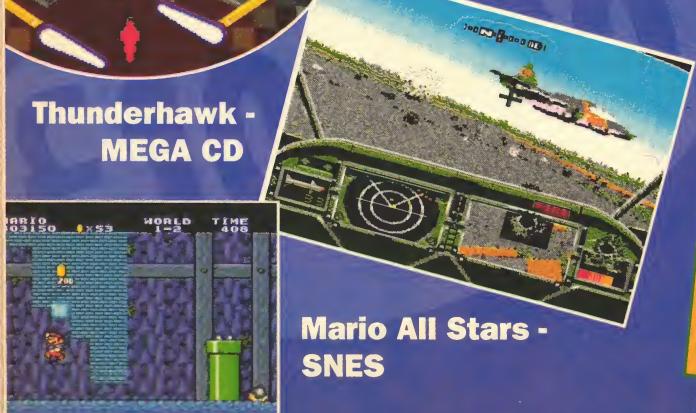

On this page you'll see the dates and venues for the first round eliminators. They're being held in Virgin Retail outlets in the major cities of Britain over the next few weeks.

All you have to do is turn up, and play. If you're good enough - and you'll have to be very good - you'll be into the next round. And after that... the finals at the Future Entertainment Show in London on 11 - 14 November.

The National Computer Games Championship is organised by Future Publishing, producer of this, and many other great games magazines, and organiser of the Future Entertainment Show.

# Back issues

**SOLD OUT!** Issues 1-65, 67-74  
 Still available Issues 66, 75-95

Issue 90: The world's hugest collection of Multiface pokes (more than 478 of them). On the tape: Steve Davis Snooker (full game) and LARA (m/code utility).

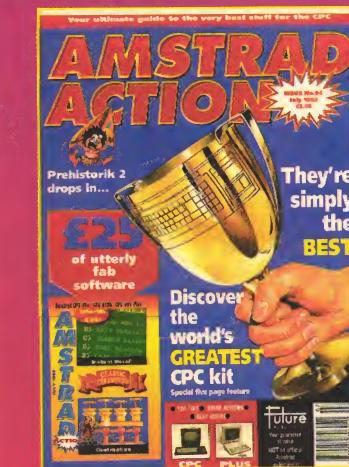

Issue 91: All the dirt on who's doing what in the CPC world. HackIt black box of tricks reviewed. On the tape: Tasword (word processor) and Colossus Chess 4.

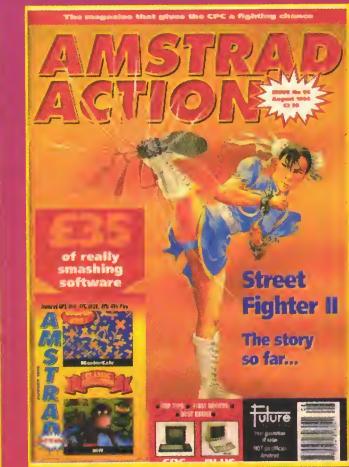

Issue 92: Just how do those floppy disc things work? Plus a review of the first 3.5 inch A: drive. On the tape: BooTracker (music utility), SYNTAX and Balloon Buster.

Issue 93: 101 interesting things to do with business software. Reviewed: Super Cauldron, Amstrad Pen Pad. On the tape: Racing BoxForm, Mystical, Balrog.

Issue 94: The very best software and kit for your CPC. Prehistorik II reviewed. Trakers reviewed. A brief history of the computer game. And in loadable form on the tape: MasterCalc and Biff.

Issue 95: Street Fighter 2 progress report. Trakers reviewed. The story so far... Discover the world's GREATEST CPC kit.

Issue 96: The secrets of ROMs and carts revealed, and the start of our complete cart round-up. On the tape: Screen Designer (art package) and Neil Android.

Issue 97: Don't spend a fortune. Find out what are the best budget games and serious software. Plus: the excellent Zapp Assembler adorns the covertape.

### Amstrad Action Back Issues

I would like the following back issues...

UK price - original cover price • Europe £5 • Rest of the world £7 • Post and packing is £1 per order (regardless of size).

Please make all cheques payable in pounds sterling to Future Publishing Limited, and send the whole lot off to AA Bargain Basement, Future Publishing, FREEPOST, Somerton, Somerset TA11 7BR.

# Technical Forum

If a little knowledge is a dangerous thing, then Richard Fairhurst is the intellectual equivalent of a 50 megaton nuclear warhead. And his vast mental powers are at your disposal every month in AA as he strives to answer your technical queries. You lucky people.

## Fax a lot

I hope you can help me. I would like to be able to send and receive faxes from my CPC 6128, as well as electronic mail. Could you advise me how this might be achieved? Peter Howells, Oxfordshire.

Receiving faxes is tricky. You can buy dedicated fax-modems, but there isn't any software available for the Amstrad that will pick up the image received from one. Fax-modems are only really a viable proposition on 16-bit and 32-bit machines.

For electronic mail, you'll need a serial interface (try Siren Software) and a modem, which you can pick up for about £120 from hardware advertisers in the computer press. To connect a modem, you need to have a new-style BT socket rather than an old hard-wired phone. Finally, you'll need to find a bulletin board or other service to send and receive your electronic mail from: ask the people who you're planning to contact which systems they use.

Some high-brow electronic mail services also offer facilities which will convert a message into a fax and send it, so this will solve half of your fax problem

Richard

## This is a dead CPC

For Christmas I got a Star LC-200 colour printer. It worked for a while, until I plugged the interface into the computer while they were both on. Now whenever I try to print the screen scrolls up the monitor as if someone has changed the vertical hold and a load of garbage appears on the screen. None of the keys work. Is it my printer that needs mending, or my 6128, and how much will it cost to repair? Please help me.

Chris Tyson, Cumbria

You think you've got printer problems... Check out what AA gets printed on:

Never connect or disconnect anything to a computer while it's switched on: as you've found out, it can cause serious damage. It sounds like you've damaged one of the chips inside your CPC, and since they're soldered in, it's not an easy job to replace them. Try a repair company like ERC (0733 371279), STS (0446 746920) or your local computer repair shop if they know about CPCs. By the way, if there are any other repair companies out there who know their way around a CPC, write to Techy Forum and tell us.

## PBM poser

**1** I intend to buy myself a printer for my 464 as I want to start up my own play-by-mail game, but I am having trouble deciding which printer to buy. I'm on a budget, I'm broke and I've got no money. It doesn't matter how fast the printer is and it also doesn't matter if it can't handle graphics or colour. What should I buy?

**2** A while back I was going to buy an Amiga, so I sent away for Commodore's free catalogue. Inside was an ad for a Commodore MPS 1270 inkjet printer. This cost £179.99. Will this work on my 464? Will I need a special lead made up? Which is the better printer to get hold of - dot-matrix, inkjet or bubblejet?

**3** I'll be using my faithful CPC to help me with my PBM game. Are there any programs on the market, besides

model of memory expansion you have). Some programs, though (such as Discology), won't take advantage of it, whereas they will use a 256K memory expansion (phew).

## Hardware envelopes, part deux

Remember a while ago I described how to use hardware envelopes on the CPC? Well, here's a little follow-up to that. Define a hardware envelope using shape 8, 10, 12 or 14 and set the period to 1 (for example, ENV 1,-8,1). Now make a sound using that envelope: SOUND 2,478,200,15,1 should do the trick. Nice effect, isn't it?

TIP OF THE MONTH: Don't Shave My Locks, Daddio in the 4:15 at Chepstow at the November meeting. Trained by S Forrester, place a bet that the horse expires before the race is over.

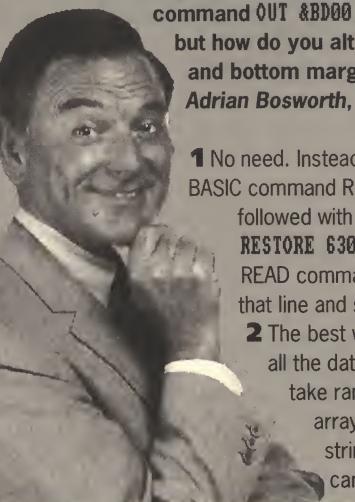

TIP OF THE MONTH: Don't Shave My Locks, Daddio in the 4:15 at Chepstow at the November meeting. Trained by S Forrester, place a bet that the horse expires before the race is over.

## \$64,000 questions

I have written a quiz program in BASIC 1.1, with the questions separated into blocks and categories rather like *Trivial Pursuit*. Unfortunately, I have stumbled upon two major problems with which I would be grateful for your help.

**1** The questions and answers are CHAIN MERGED into the main program in the form of lines of data, each line comprising one question and the answer. Because there are different categories, I need to be able to read only the lines of data from the required category. I have tried inserting a routine between each category to do this, with the variables after the READ command different in each instance, but it still reads the first line of data in the whole program onwards. Would

Smarm, smarm, sincerity, mm-mm, oh so smarm...

it be possible to load the categories into different parts of the memory and call them back when they are needed?

**2** I need to be able to read a line of data at random from 26 lines of data and ensure that any line is only read once. How can this be done?

**3** I know how to alter the right-hand margin of the screen from BASIC using the command OUT &BD00,30 (or whatever), but how do you alter the left-hand, top and bottom margins?

Adrian Bosworth, Devizes.

**1** No need. Instead, you can use the BASIC command RESTORE. When followed with a line number (eg, RESTORE 630), this will set the next READ command to read data from that line and so on after that.

**2** The best way would be to read all the data into an array, and take random strings from this array, wiping out the strings after use so they can't be read again. This

means that when you take a string at random, you must make sure that it isn't blank (and try again if it is). Here's an example routine to read in the array:

```
100 DIM a$(26)
110 FOR n=1 TO 26: READ a$(n): NEXT
120 DATA (put the strings here)
```

You can then pick out strings (into the variable n\$) as follows:

```
200 a$=INT(RND*26)+1
210 IF a$(a)=: THEN 200
220 n$=a$(a): a$(a)=
```

**3** In fact, the way you're doing the right-hand margin is a bit of a short-cut. The way you're supposed to alter these margins is by selecting the appropriate CRTC register with the command OUT &BC00,r where r is the register number and then setting its value with OUT &BD00,n where n is the value to set it to.

Register 1, usually 40, controls the width of the screen. Register 6, usually 25, sets the number of rows. Register 2, which is normally 46, selects how far to the left it is and register 7 (default 35) how far up. Play about with altering the values by one or two to see how it works.

Richard

As for Rod's legendary living beard, it is, in fact, still alive and well and working for AA. For everyone who wondered where Simon's wig came from, worry no more. And Simon also tells me that he managed to work to work out the tabs for the Metallica song in about three seconds flat, so you can work them out for yourself. Charming, isn't he?

Richard

## Countdown

I am currently writing an adventure game for the CPC. Part of the program is in Machine Code and part of it is in BASIC. Although I am a hardened BASIC programmer, I am a freshman when it comes to Machine Code.

The routine for prompting the player to type in a command is the BASIC INPUT command. However, here are my problems.

**1** How do you program a Machine Code routine to continue to decrease a timer when the INPUT command is waiting to be answered? The timer I require is this: starting at 59 minutes 59 seconds (printed on the screen) decreasing to 0 minutes 0 seconds.

**2** Once this is up and running, how can you detect, in BASIC, that the timer has reached 0?

**3** If the game has a Save Position option, can you save the value of the timer and reload it to that value? I would guess that the value of the timer would have to be transferred from the BASIC program into the Machine Code program, but how is such a skilled feat of programming accomplished?

Countdown, with no Richard Whitley in sight, thank God.

# TOP TIPS

## Lead of the month

At Amstrad Action we have to deal with more leads than Inspector Morse, or even Battersea Dogs Home. This month's connector is for Plus owners, so that they can connect their machine (with those awkward Amphenol connectors) to standard CPC peripherals.

As per usual, Maplin is the probably best place from which to buy parts. You can buy a copy of their catalogue from any branch of WH Smiths, or there may even be a Maplin shop near you. This is especially useful, because one of the relevant parts has actually been discontinued, but you should be able to pick it up in the bargain bins you'll find in every Maplin store.

Right, let's get down to business. First off, you'll need a length of 50-way ribbon cable. You also need a 50-way IDC card edge connector, to attach your peripherals to and a 50-way male Centronics plug, which goes into the Plus socket.

Finally, you need a 50-way Reversiboard, which is the tricky part to get hold of. But providing you can find one the rest is no problem.

Simply take the ribbon cable, and clip the edge connector on to one end and the Centronics plug on to the other. Now insert the Reversiboard into the 50-way IDC card edge connector, and

## Mr Memory

I'm always receiving letters from people who want to know how to expand their CPCs past the standard 128K. The usual trick is to use dkTronics memory expansions, but there are a few things worth noting about these.

First of all, a 64K expansion will only expand a 464 or 664 up to 128K. You can't use more than one at once and you can't use them on a 6128. A 256K memory expansion will add 256K to a 464 or 664, including the 64K provided by the 64K expansion, so you only need one or the other; having both won't do you any good.

For the 6128, a 256K memory expansion will usually only give you 192K extra, as you already have 64K of it inside your computer. However, there have been two models of the 256K expansion and one of them will give you a full extra 256K. Check before buying.

Finally, a 256K silicon disk will expand any CPC by a full 256K and can be combined with a 256K memory expansion to give you 512K (if you have a 6128, it will be 448K extra, no matter which

**4 Is it possible to get my hands on another copy of the covertape which contained the Devpac Assembler? I lost mine!**

Graeme Brown, Midlothian

**1 You'll need two variables in your Machine Code program: one for the number of minutes to go, and one for the number of seconds to go. First, write a routine which takes one from the seconds variable, and if it goes below 0 (in which case it will become 255), set it to 59 and take one from the minutes variable. Test this routine by CALLING it a few times from BASIC, and printing out each variable using BASIC (with a PEEK command to the appropriate addresses).**

That's the first bit. Now add an extra variable; call it ticks. This starts at 50, and is decreased by one on every CALL; when it gets to 0, it's set to 50 again and will only then let your seconds count routine be called (which, of course, also changes the minutes count). This means that you should have to CALL this last routine 50 times to decrement it by one second.

By setting up what's known as a frame flyback interrupt, you can get it to CALL the routine 50 times a second. This is done by loading HL with the address of 10 blank bytes (for the CPC to use as workspace), DE with the address of the routine you've just written and BC with &8100. Then when you CALL &BCD7 the routine will start doing its stuff (to turn it off, load HL with the address of the 10 blank bytes and CALL &BCD0).

Finally, you'll want to print the values on screen. Write a routine that prints the contents of

## Distress flares

There is always hope. Well, almost always - 70s fashions were the nearest civilisation has ever come to complete hopelessness. But we managed to survive that nightmare so the human spirit can triumph over any adversity.

Technical Forum is here here to help you so if you have a problem don't suffer in silence. By going public with your particular problem not only can we help you but you could be helping out other people in similar straits. Coming clean is simple. Just write to:

Technical Forum, Amstrad Action,  
30 Monmouth Street, Bath, Avon, BA1 2BW.

You know it makes sense (well, probably).

the minutes and seconds variables and CALL this every time you change the seconds count. If you run this, though, you'll notice that it messes up the position where text is printed on screen. There's a clever way around this: at the start of your BASIC program, define a window (say, #7) for the timer to go in. Put LD BC, 7: CALL &BBB7 at the beginning and end of your printing subroutine; this swaps windows 0 and 7 around, and the timer will appear in that window.

**2 The easiest way is to PEEK out the minute and second variables from the appropriate addresses and see if they're both zero. You'll need to put a feature in your Machine Code routine that stops the clock when both variables and seconds are zero, otherwise it'll keep on going.**

**3 To save it, just PEEK the two values and save them out from BASIC in an OPENOUT file when you reload, POKE the values back again.**

**4 Devpac was on the AA71 covertape which, unfortunately, has sold out. Your best bet is to put an ad in the Wanted section of Small Ads and see if anyone will sell you a copy!**

Richard

## Board of Versailles

**I'm happy to subscribe to Amstrad Action because there are now fewer French publications about the CPC and you get tapes with AA (which are going to get better and better from now on by the way - Dave).**

**1 Do you know the specifications to read/write 800K disks (MS800 and ROMDOS) with 22DISK on a PC? I tried with the information given by DPB.COM, but files were truncated.**

**2 I have a CPC664. When I start the computer, I often have drive errors (Drive not ready), especially with Maxell disks, less often with Amsoft disks. But after a while, there are fewer errors. What is the problem?**

**3 I want to create a Fido BBS with CPC software to download. I need addresses of PD libraries which accept Visa, as I can't send an SAE from France. Do you know about any CPC BBSs in England or Germany?**

Emmanuel Roussin,  
Versailles, France

Things were going smoothly at the Treaty talks in Versailles until the day the Kaiser turned up in drag.

Richard

**1 Run FORMAT\$BIN, the formatting utility which comes with ROMDOS. This displays DPB information for each format with which ROMDOS can cope, which you should be able to enter in one form or another into 22DISK. Check that 22DISK can cope with double-sided**

A good bulletin board to try is Aspects, (061 792 0260); if you're calling from France, miss off the first zero. This is a Fido co-ordinating centre and, as well as carrying Amstrad and CP/M echomail areas, it also has a wide selection of CP/M and AMSDOS software to download.

Richard

# Venture Forth

For verily, they did journey to far off lands to gain the wisdom of the Prophet Of Hairy, but he told them to go away, because he was on the toilet. So they waited centuries for the Prophet's descendant, Simon Forrester, to enlighten them in the ways of writing adventures.

You lot back again? I'd better write something then. Er, what did I say we were going to get up to this month last month? Oh, yeah, more about getting your adventure characters to interact. Right, I think this calls for another trip down the laundry.\*

## Key words

Let's create a woman to work in the washing powder shop, then. She'll be this hideous old battle-axe, who'll either witter endlessly about the

weather, Mrs Pratsbottom-Dunghill's varicose veins and the personal lives of her neighbours, or she'll sell you some

Ah, the laundry woman. I need to buy some powder off her to wash my Metallica boxer shorts.

The distressingly frumpy woman behind the counter reached down, got a packet of powder, and took the money you offered for it. Thankfully, this whole hideous

Ooh, 'ave you 'eard about 'er be'ind the bar at the Lamb'n'Slaughter? Y'know, the one with more front than Blackpool?

## The mammoth Venture Forth Q&A session

In which Simon answers the most repeatedly-asked questions about adventures that you've been phoning and sending in since we started this series.

### Should I write my adventure in Machine Code?

That's a toughie. You see, the whole point of computer languages is that different languages are better suited to different tasks. Is Machine Code suited to text adventure games? To be honest, not really. It can be useful, but the odds are you'd be far too busy working out how to do complex string functions to spend any time with the plot, content and quality of the game.

Machine Code is good, though, but you have to use it correctly. BASIC's advanced string handling capabilities (well, in comparison to Machine Code, anyway) make it the obvious choice, but who's to say you can't set up an RSX command to print strings you pass it in a slightly more glamourous, multicoloured font?

Failing that, if you want to store graphics as pictures as opposed to a

series of lines and filled polygons, you'll need to knock up some kind of Machine Code routine to take care of this. In fact, I think I'll put something on the covetape at some point to let you store, display, save and load screens.

### Are graphics important?

You'll find, once you start to get further into writing your game, that graphics may fall by the wayside to a large extent. The simple situation with

graphics is this; your adventure is either graphically orientated or text based. If you are about to write a text-only game, you should make sure your descriptions, narrative and the like are of the very highest quality – you could have a picture of a dungeon, with the accompanying text, "You are in a dungeon. You can see..." but if you didn't have a picture, you'd have to go in for something a bit more like:

You're standing in a cold, dark dungeon. Only a vague shaft of light pouring in through the

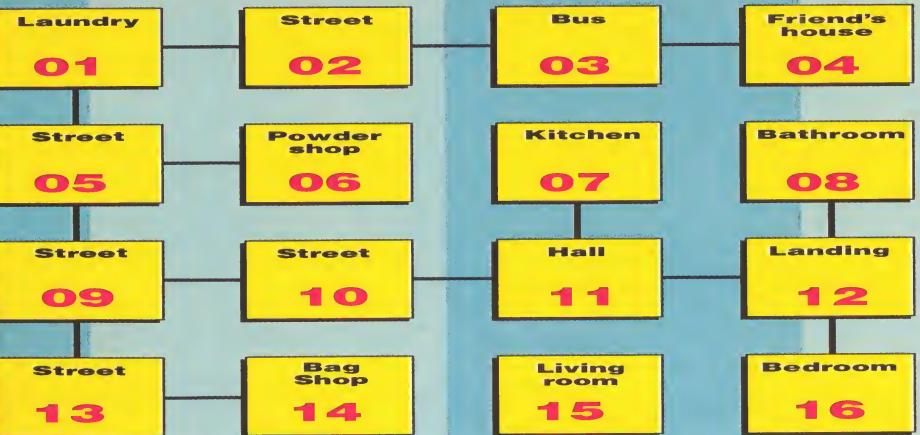

too-grimy window high up in the wall breaks the dark, foreboding shadows. Looking about you with a shiver, you can see...

As you can see, with a more descriptive (and, in a sense, poetic) narrative, you can completely do away with the need for a picture of any kind.

### What's the ideal map size?

This depends wholly on the plot. For instance, if you were writing an epic romp around a huge landscape, you may well be looking at a map maybe 16 squares by 16 squares (giving a total of 256 locations). This may not seem like much, but an average-sized game like Gnome Ranger contains only 36 locations per level. 256 squares should be easily enough to keep your player satisfied for a lifetime.

If, however, you want to do something else with the next couple of years, and so haven't got the time to write 256 room descriptions and about 100

The map of the laundry adventure that this feature is all about.

encounter with the housemaid from hell ended here, and you escaped with your life into the busy street.

It's quite simple to write stuff like this, but it gives atmosphere to an otherwise blocky adventure. But remember – in the routine, you need to place the player back in the street just outside the shop.

As well as this, you'll need to take the money from the player's pocket, and replace it with the washing powder.

### A-wandering we shall go

What about her other attributes (*hang on, this is straying into Carry On territory – Dave*)? Will she wander about the streets? Probably not, to be frank, as an unattended powder shop could cause slight problems. It would be fun to give the player the opportunity to attempt to steal a packet of powder, probably by adding to the description:

You can see an unattended packet of powder on a shelf. What a stroke

Well, they say she's having a fling with that Wilkins lad. Y'know, the one who survived that car crash, but looked strangely different afterwards. He must be 50 years 'er junior if a day. An' 'er with her problem...

of luck, if you're an unattended packet thief – but you're not, are you?

It's fun, and players will love it! When they try to half-inch the powder ("half-inch"? You've been watching too much EastEnders, my son... er, I mean, Simon – Dave) you could have the woman slapping the back of their hand, calling the police, giving you a lecture on the "yoof of today" or something. All this is straying off the point, though, but it's always a good idea to stuff as much detail into a game as possible. This is only one of the hundreds of little

diversions you could build into a game even as small as this, so never restrict yourself to the straighter elements of the plot – the player doesn't

Er... yeah... but... the powder...? could...?

Dunno what 'e sees in 'er. Money. Must be. They say she bumped off 'er old man with a arsenic-laced jellied eel for the insurance...

or so object descriptions, about 36 (a grid six squares by six squares) should suffice.

### How difficult should I make it?

Difficulty is a tough one (*is that supposed to be a joke? – Dave*). I think my best move here would be to refer you to Tim Norris' hat/lock monologue of issue 95 – take a read:

"One of my pet hates in the puzzle department is the frequent lack of logic. A puzzle should be puzzling, of course, and if the solution is too obvious then your player will soon get bored. On the other hand, though, if your player gets stuck, looks at the clue sheet and says, 'Yeah, right. Like I was really going to think of doing that,' then you've lost them."

"For instance, never, ever, ever have a magic lock that only opens if you're wearing a hat. Hats don't open doors. Keys open doors. Magic spells open doors, if you insist, but hats never open doors. Ever. If your player arrives at the door without a hat and finds the door won't open, they'll go off in search of a key. All their energy will be focused on the acquisition of a key and they might well ignore a hat if they find it. When they find out the lock was activated by millinery, they'll hate you. They'll send letters of complaint to AA about you. Eventually you'll have to change your name and retire to the Hebrides. When you get

there, people will say, 'Aren't you the hat-lock fellow?' and you'll die poor and unloved. Don't do it."

"Puzzles need to be logical, but not necessarily straightforward. Let's get back to the locked door. You need a key, but just walking round the corner and picking up a key wouldn't be much of a challenge. What if the key is plainly visible in a little rocky recess, but when you reach for it a huge rock smashes down to block your access to it? You need some means of stopping the rock from falling. A stick? Whatever the solution, the things you need have to be pretty nearby and their use has to be logical, if not obvious. It's not a bad thing to leave your player completely stumped if they say, 'Yes, of course, how clever,' when they find out what's going on. Anything to do with hat-operated doors, though, and you might as well kill yourself straight away."

### What makes an adventure 'fun'?

There's a question and a half (pedants, don't argue). The way we see it, there are two ways your adventure can go. You can either have wonderfully verbose text, with incredibly detailed and straight descriptions to provide atmosphere, or you can

Are you getting the hang of this now? Good... Those three test conditions allow the following phrases to be recognised:

- 1 Please let me go, sir
- 2 Please go away
- 3 Go away or I'll kill you

Are you beginning to realise just how versatile the system is? So anyway, our mugger is going to wander around quite a bit. However, you can't give him freedom of the map, because you're not likely to find many muggers in your bedroom, friend's house, etc. For wandering characters, then, you need to give a list of locations they can be in. For Derek the mugger, his access is limited to locations 1, 2, 3, 5, 9, 10, and 13 (see the map).

This is a great method for wandering characters, because you can assume that all characters are wandering, only some can only wander around one location – the powder shop, for instance, who's restricted to the powder shop.

### This is a promise

Wait for it, wait for it – next month we will be printing the full program. No beating around the bush, it will be here, in full. In theory, you should have all written your own version of our laundry adventure by now, but things in theory have a habit of staying theoretical.

So get your fingers ready for a mammoth typing session. You have been warned.

Shut up you old hag and give me the washing powder!

opt for the humorous approach. The more serious approach has the same kind of appeal as something

like Lord Of The Rings (the book), whereas humour can have your player rolling around the room in mirth, so keeping the adventure constantly entertaining.

The one thing you must never do is stray from the generic concept. For instance, if you were to write, for example, a Red Dwarf adventure, you should never, and I repeat, never stuff it full of 'in jokes', as someone who hasn't seen the TV series will just be alienated.

The plot also needs to be interesting and original; try to come up with fresh ideas.

Goblins kidnapping princesses and dragons guarding treasure are more of a yawn than a Hungarian film about the gestation period of the Himalayan snail (though sometimes using clichés to take the mick out of them can be effective). But most of all keep the puzzles interesting and challenging. Puzzles are the meat of any adventure; if they don't work, no amount of Booker Prize-winning text will help.

# Type-Ins

Climbing mountains. Rowing bath tubs across the Atlantic.

Typing in listings. Herculean human achievements, the lot of 'em.

Simon Forrester presents this month's epic selection...

## Menus

First up this month, R Shaw has provided us with a nifty little program for creating menus for disk programs. Run the first program to create a data file, saving that data file on to the disk where you want your menu to be. Next, save the second program to the destination disk, and run it; it loads up and uses the data file you created with the first program.

## The Type-ins Workshop or, hang on, just what the heck are all these boxes about, then?

You could just type in these listings and use the programs, but let's face it, if you're new to programming a lot of the commands might not make sense and copying them parrot fashion just ain't gonna be much use to you. That's why we've introduced the Type-ins Workshop, in which I highlight certain lines and explain what they do. Brilliant concept, or what?

```

```

## 1150 - 1170

This bit is worth picking out to stop people getting confused. The OPENIN command is actually pointing the CPC to a user-created file, containing variables. You're about to see how it works.

Well you would be, but first, the program executes a CLS #1 command, clearing window 1.

Next, there's an INPUT #9 command. However, it's not as simple as you may think. You see, there isn't a window 9. That window is, in fact, the file the program has just pointed the CPC to! Remember, then, that window 9 always refers to filing.

### Function Keys

Following this month's main theme of the issue about making your life easier (a concept with which I can really sympathise), here's a dead simple, and mercifully short, program from Nicholas Johnson of Christchurch, New Zealand, that defines various often-used words in programming to the function keys. The easiest way to work out what each key does is just to run the program and press each one. Anyway, here goes:

This program was actually sent in by someone declaring, 'My CPC can do anything an Industrial Light & Magic machine can!'

### ROMBO DISCOUNTS

#### ROMBO ROMBOARD Now only £25.00

The most widely used of all Romboards. 8 sockets; on/off switch for each; high 8 or low 8 ROM slots selectable; facility for a ZIF socket or 16k RAMROM.

**DISCOUNTS**  
20% - with the Dual-Mode Drive  
10% - with ROM software valued  
at £20 or more.

#### EPROM PROGRAMMER with ejector socket - £30 with ZIP socket - £35

Programs 8k and 16k, 12.5v and 21v eproms; fulleprom, parteprom and single byte programming; ROM file editing. Supplied with easy to use menu driven Software, PD games ROM file, utilities to turn Basic and machine.

#### 32k RAMROM - £14.95

32k of RAM in two 16k blocks. Each behaves like a ROM, surviving resets, when loaded with ROM software. Ideal for testing ROM programs without the need to blow/erase eproms.

#### ROMBO VIDEO DIGITISER Now only £65.00

Captures video pictures from a video recorder, camera or TV with 'video out' to computer memory. Manipulate pictures, save to disc, use in programs, print out, etc.

#### ROMONOFF SWITCH - £7.95

Connects to the expansion port to turn all external ROMs OFF or ON as needed. Not suitable for a 464 with disc drive.

### 3½" DUAL-MODE DRIVE

Pound for pound the best value around  
Now includes 22DISK - the No. 1 CPC/PC/CPC file transfer program.

Also includes:  
\* MS800 on disc \* MS800 on ROM  
\* 10 blank discs \* carriage

Our superior drives do everything that all other 3.5" drives do - and more besides!  
CHECK OUT THESE FEATURES:-

MODE 2: Full, unimpeded use with Rodos, Ramdos, Romdos and Romdos XL giving up to 800k per disc without the need to use the SIDE SWITCH. The statement elsewhere that "other drives... will only allow you to access 400k at a time" is a lie as many who have resorted to adding their own side switch to inferior drives can confirm. Full use of MS800, the no.1 high capacity formatter - 800k per disc at 400k per side. MODE 1: works as a complete alternative to the FD1 B drive - 180k per side. Without the side switch, mode 1 is not possible.

OVERALL: Ultra quiet mechanism, the type used in most professional computers; super small; separate power supply; sleek metal case. You need to buy nothing else to use your drive immediately. MS800 is supplied on disc and ROM whether or not you have a Romboard - see the ROMBO DISCOUNTS.

464 PLUS 1st drive - see this ad.  
Old 464 1st drive - not suitable.

Please state your computer model when ordering.

**£79.95**

Name/address.....

### 464 PLUS 1st DRIVE - £120

Exceptionally good tape to disc transfer utility, very large on-disc database of verified transfers. Produces stand-alone transfers.

#### BONZO BLITZ

Transfers all varieties of SPEEDLOCK tapes onto disc, producing stand-alone transfers. On-disc database of verified transfers. Includes 4 adventure games - FREE!

#### BONZO'S FLASHPACK

Over 60 additions to Basic, some very powerful. Flash Basic's commands can be used within your own Basic programs but it does not need to be present for the programs to run!

#### MAXIDOS

The most comprehensive and effective general disc utility available for the CPC. All features work with Amsdos, CPM, Ramdos and Romdos. Includes: disc/file copy, disc optimise, CAT inc. erased files, restore erased files, disc editor and much more.

#### BONZO'S BIG BATCH

Fast, flexible Database; superb pools predictor, screen and sprite designer.

#### SUPER MEDDLER

D.I.Y. kit

**464 PLUS** Extra 64k 15.00 25.00

# POWER UP

Welcome to the leisure zone, where AA gets serious about the not-so-serious side of the CPC

These are the reprobates that throw together this mag every month, in other words, us, the AA crew. And it was only a matter of time before we decided to do a 'Cheats' special issue, because none of us are above the odd 'creative interpretation of rules' when the need arises...

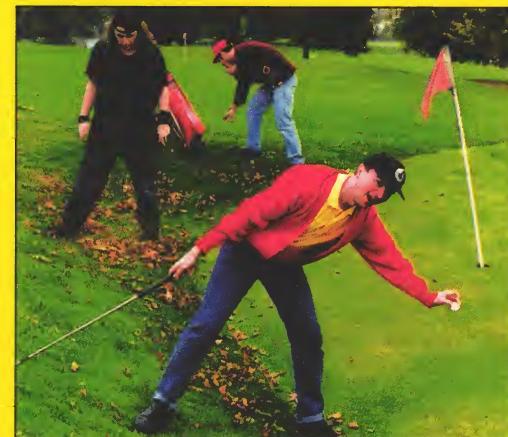

**DAVE GOLDER,**  
**Editor**

**First memory of cheating** Planing the sides off his square brick so it'd fit through the round hole (or filing the hole into shape).  
**Favourite golfing tactic** Subtly stamping his opponent's ball so far into the bunker that they wouldn't be able to shift it with a JCB earth-mover, let alone a sand wedge.

**Best advice for cheating** In exams Hiding notes on a pieces of paper rolled up and hidden inside your massive collection of biros (just in case one runs out, of course).

**Rave of the month** Reeves and Mortimer.  
**Rant of the month** Being forced to wear that stupid jumper for the photoshoot.

**ANDY OUNSTED,**  
**Art Editor**

**First memory of cheating** Gluing my brother's tiddly-winks to the kitchen table.  
**Favourite golfing tactic** Making sure you have a plentiful supply of identical balls which can be 'strategically' placed when your opponents are looking for the ones you've just conveniently sliced into the deep rough.

**Best advice for cheating** In exams Getting the person who's sitting in front of you to wear a T-shirt you've printed up with all the answers on the back (in code, of course). (Isn't that just a tad convoluted? - Dave.)  
**Rave of the month** The rain.  
**Rant of the month** The bits when it didn't rain.

**First memory of cheating** Playing patience with marked cards and still losing miserably.

**Favourite golfing tactic** He doesn't actually play a single stroke of golf - he prefers offering his services as a caddy who's quite happy to fix the odd shot or two for the sake of a tidy little back hander.

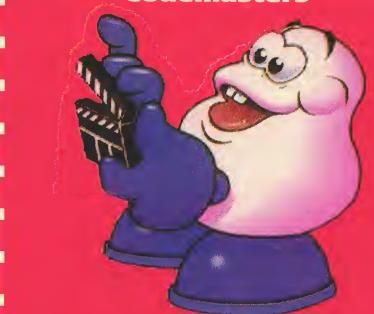

**Best advice for cheating** In exams Bribery.  
**Rave of the month** Karen Keating.  
**Rant of the month** Taxi drivers who talk about their kids throughout the whole journey.

This month's (photo) shoot was conducted by Sarah 'Appeal' Tanser.

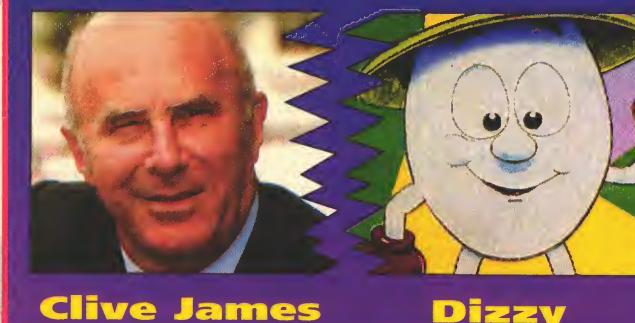

**AA Trump Cards # 1**  
For you to cut out, collect and, maybe one day in the far-flung future, even play a game with.

**Seymour**  
**Codemasters**

Cloying cuteness factor ..... 9  
Appearances ... 2 (many but at least 5)  
Hardness ..... 1  
Street Cred ..... -27  
Quality of games ..... 6  
Resemblance to a deckchair ..... 0  
Overall AA totally biased rating ..... 2

## Separated at birth?

## Fire and brimstone

Prophets of doom, listen to me. You harp on about the demise of the CPC scene as though it was foretold in the old testament.

The good old 664 has had this rough treatment since the very first issue of this hallowed magazine, and yet people are still using, nay, enjoying this versatile piece of machinery no less than eight years later.

I am sick of doombrokers who have nothing better to do than whinge about one software house or another backing out of the CPC market. Don't just sit there, do something. There may be less and less coming from the softies but all you need to do is look across the Channel to the European PD scene. It is starting to blossom. People are learning, they are seeing, they are doing, they are learning. I'm not a know-it-all.

I'm just sat here watching, seeing, learning.

I believe software houses are only bowing out because they've seen the PD challenge growing and are merely saving their own skins. I may be wrong, but have a look anyway. It won't hurt and you'll probably learn.

Remember these words  
The software houses do not

## Coming soon

1 Please, please, please could you put the following on the covertape?

- Elite
- Laser Squad
- A decent Assembler

2 I enjoyed Tasword and Instant Recall very much.

3 What are RODOS and RODOS Xtra (advertised with the Multiface)?  
Shabaz Hamid, Cardiff.

1 Wanna hear some good news? Well two out of three ain't bad.

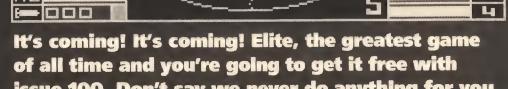

- Yes, and very, very soon.
- Not in the near future, but you never know your luck.
- We already have. Check out Zapp Assembler on last issue's tape.

2 What can we say but Vegetarian Pot Noodles? Thanks, I suppose.

## The things people do

To be quite honest, I've had my trusty CPC6128 for several years and still haven't really explored its potential. Bought the odd mags every now and then (when there was a choice) but all this computer jargon leaves me a bit befuddled. Buying a recent copy of AA has revived my interest (I wanted the spreadsheet on the covertape).

The ROM feature in AA96 caught my eye and I wonder why more software manufacturers don't give the option of a ROM chip version of their particular creations. Virtual instant access to a package, plus the extra memory available gives something like Protext on ROM a distinct advantage over disk. It's worth the purchase of a ROM board just for this word processing packaging alone, in my opinion.

It's coming! It's coming! Elite, the greatest game of all time and you're going to get it free with issue 100. Don't say we never do anything for you.

3 They are a couple of frankly rather nob operating systems, according to Simon, who knows about these things. The hairy one's advice is, 'Don't bother.' **Dave**

## Poster poser

Why doesn't your ace new art editor, Andy, do a poster for the best game you review every month and for the techy bods a big copy of the technical project on the other side so they can see what to do more easily and you've more space for explanations (a bit like Sega spit! Power spit!).

**Graham Entwhistle, Manchester.**

Andy O would love to do a poster, basically because they're so easy to do and he's a lazy... (oil - Andy) er, seriously overworked Art Editor. But Simon and I reckon that what most of you lot want is a magazine packed full of good, solid info on the CPC and lots of it, and so devoting two of our precious pages to one picture seems rather gratuitous. But we could be wrong, and if we get an avalanche of mail pleading for us to stick posters in the magazine... well, we're here to please.

**Dave**

## EXPOSED!

### SAUCY SUE AND THE BULGING BARBARIAN

Nope, I really don't think centrefolds are quite our style. And anyway, it looks more like something out of Kerrang! or Metal Hammer.

dictate to the buyer. They've got it all the wrong way around (much as AM Sugar and Roland Perry did).

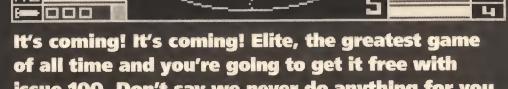

Linden C Gill, no fixed abode (apparently) PS I do not own, nor do I have any connections with a PD library.

While I loathe generalisations, there is one about the British which rings true - we have a

reluctance to get involved with Europe. We whinged when we joined the Common Market, ERM had us fuming and any mention of a unified European currency has us spouting speeches about long and honourable traditions. Which is a shame, because we miss out on a lot this way (yeah, like that seminal punk-glam beat combo from Germany, Die Toten Hosen - Andy).

But here at AA we're not going to make this mistake. The European CPC scene is very active, and we've got plans underway to make sure we keep you touch with what's going on. **Dave**

**GB**

It's coming! It's coming! Elite, the greatest game of all time and you're going to get it free with issue 100. Don't say we never do anything for you.

3 They are a couple of frankly rather nob operating systems, according to Simon, who knows about these things. The hairy one's advice is, 'Don't bother.' **Dave**

An idea for future issues of AA might be some input from your readers about the more unusual uses they have found for their CPCs. For instance, my wife Betty runs knitting machine patterns tailored (no pun intended) for the CPC by Terry Mason. **David Noakes, Rochester, Kent**

Well, I reckon Simon's found the most unusual use of a CPC ever, but a pending lawsuit from a satellite TV station in Denmark forbids me from telling you what it is. If anyone's got a legit, weirdo use for their Amstrad, let us know. **Dave**

## Console-ation

I have read your magazine for several years and as well as using a 464 I own a Master System. Recently, though, I have been rather offended by comments in your otherwise excellent magazine. The comments have been directed towards console owners such as myself and have been along the lines of, "Console owners are game-playing morons," and, "Console owners are traitors to the CPC cause."

Admittedly, I use my console to play games, but I use my Amstrad for much more, for both games and business programs. I think it is rather unfair to assume that just because I own a console I am unable to use serious programs and I only play games.

The facts stated above should prove that I am not a traitor. I use my Amstrad for more than my Sega machine. Every two weeks (or thereabouts) I buy a new budget game or send off for some PD. The other week I bought a printer for my Amstrad.

Surely me playing games on my Sega is just the same as somebody playing a game on an Amstrad or am I just being over-cynical?

And it occurs to me that most of the people who comment on consoles have never even played a game on one. Or is that cynicism as well?

The fact that a console is useless for serious applications will, I'm sure, keep

many, including myself, faithful to the Amstrad for a very long time to come. **Chris Spicer, Nuneaton**

Wanna know a secret? Right well, Ex-AA Ed Rod Lawton owns a MegaDrive, Ex-AA Ed Tim Norris now edits a Sega mag and I've got a SNES tucked away at home, all as well as our CPCs. What a bunch of hypocrites, eh? But I have a dream, of CPCs and consoles living together in harmony... Okay, I admit it, we are a bit unfair on poor old console owners occasionally, but let's face it, consoles are little more than expensive toys which are infinitely inferior to the CPC in many ways. We just don't want people to forget that. **Dave**

## Metal-head missive

I am an avid reader of Amstrad Action and I find it a totally sorted read every month. Can I ask you some questions? (I think you'll find you already have - Dave.)

1 When I compose music using BooTracker (from the AA92 covetape) is the compiled code copyrighted? If so, who to?

2 Do you know when are the following games coming out on the CPC?

Street Fighter 2

Dizzy 8

Mortal Kombat

Metallica, the computer game

Any decent Tetris clone (not Drehdriis!)

3 I've never missed an Amstrad Action covetape. Do I get any prizes?

4 I've sent you a Metallica postcard. Hope you like it.

5 I can't load Addams Family on my 464. It comes with a message saying that I need 128K.

Can you help?

6 I think that a decent prize for having all your covetapes would be Dizzy 5. I can't find it anywhere in Coventry. Or Dizzy 6.

7 Can't you do anything more original in your otherwise excellent Machine Code tutorials?

8 Why not print posters?

Congratulations on eight years of sorted print and burn all rave tapes and CDs and listen to Metallica. **Simon Day, Coventry.**

1 No. Er, actually that's not entirely true, but you are allowed to copy it.

2 Street Fighter 2 - check out Amscene on page six for some exciting developments. Dizzy 8 - Never hopefully.

Mortal Kombat - you are kidding? Metallica, The Computer Game - Yep, I reckon you must be kidding.

Any Tetris clone - I'd keep your eye on our Public Image pages if I were you. There are always plenty of Tetris clones in the Public Domain.

3 What more could you want?

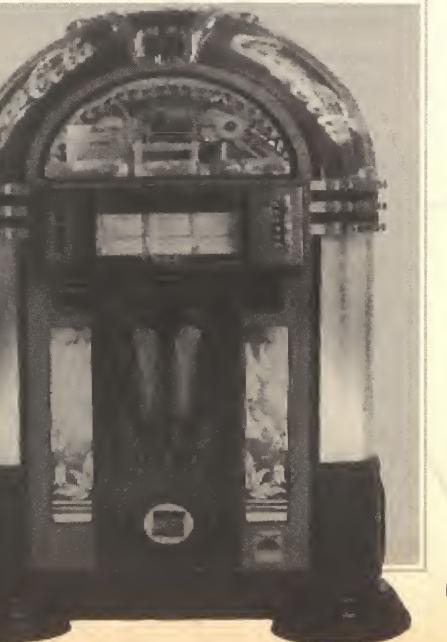

4 Er... I'll only answer that in the presence of my lawyer. Simon says yes and no. He would.

5 Yes. Get 128K.

6 Are you a masochist?

7 Is that a backhanded compliment or what? Anyway, the answer's yes. We could.

8 We've already been through this one this month. Maybe, perhaps, we'll see. **Dave**

## Name that tune

Regarding a letter in AA95 from Jonathan Brunhead about a music program where you enter notes as musical notes and not numbers, the Rainbird software company (which now does not exist) made two products: *The Music System* and *The Advanced Music System* both of which use musical staves to enter notes. Perhaps he could obtain one second hand? **David Fraser, Cheltenham.**

Anybody out there with an unwanted copy of either *The Music System* or *Advanced Music System* that you could pass on to Jonathan? You know where to write (hint - Amstrad Action, okay?). **Dave**

## Chartwatch

After buying issue 96 of Amstrad Action I decided to read it (what a revolutionary idea - Dave). I spotted the Kixx compo and read the reviews on the games only to discover that the rating for Acrojet was missing. I guess it was about 75 per cent, but who knows?

Just for the sake of it I have included a chart of my favourite games (actually, at this point in the letter the word 'diseases' was curiously crossed out to be replaced by 'games' - Dave).

- 1 Sim City
  - 2 Combat Lynx
  - 3 3D Construction Kit
  - 4 Mission Omega
  - 5 Space Crusade
  - 6 The Boggitt
  - 7 3D Starfighter
  - 8 Rick Dangerous 2
  - 9 Klax
  - 10 Dark Sceptre
- Simon Crabtree, North Allerton.**

The rating for Acrojet before it was swallowed by the printers was actually 68 per cent so you weren't far off. Thanks for the Top 10 by the way. How about some more from the rest of you lot? They're always good for a bit of controversy. **Dave**

7 Can't you do anything more original in your otherwise excellent Machine Code tutorials?

8 Why not print posters?

Congratulations on eight years of sorted print and burn all rave tapes and CDs and listen to Metallica. **Simon Day, Coventry.**

1 No. Er, actually that's not entirely true, but you are allowed to copy it.

2 Street Fighter 2 - check out Amscene on page six for some exciting developments. Dizzy 8 - Never hopefully.

Mortal Kombat - you are kidding? Metallica, The Computer Game - Yep, I reckon you must be kidding.

Any Tetris clone - I'd keep your eye on our Public Image pages if I were you. There are always plenty of Tetris clones in the Public Domain.

3 What more could you want?

4 Er... I'll only answer that in the presence of my lawyer. Simon says yes and no. He would.

5 Yes. Get 128K.

6 Are you a masochist?

7 Is that a backhanded compliment or what? Anyway, the answer's yes. We could.

8 We've already been through this one this month. Maybe, perhaps, we'll see. **Dave**

## Off her trolley

I want to warn you that you may be receiving some correspondence from my husband. His handwriting is tall, dark and handsome and will contain reference to all my hours of sweating over programs. However, the

reference will not be in praise of my hard work but will be disguised under his false claim to fame by sending in a listing for Type-In under his own monicker.

After a great deal of thought I believe I can hide any future work from my husband without resorting to digging six-foot holes in the back garden. I once worked for a chain store where the cashiers had to remember all of the prices of each article in the shop (approx 900) revising the price changes every Monday. The point is it has occurred to me that Machine Code programming should be a doddle as I can file all future programs I am working on into the most secret file of all and call them at will. This being, in my head, therefore ending all idea-stealing as you-know-who eats garlic and carves wooden crosses when he stumbles over Machine Code.

Now I arrive at the stumbling block – how can I post my head to your Type-Ins without Hubby noticing that it's missing?

If you have found this letter hard to follow then you have found the solution to the puzzle – why is there an apparent shortage of female programmers? The answer is, you just don't understand us. **Ann Wilson, Co Durham.**

Nope, I understood your letter completely. You want to decapitate yourself to stop your husband from nicking your ideas. Perfectly logical. Apart from the fact that we haven't got the right leads to connect your head to our CPCs (I could be wrong here, but I don't think CPC/neural network null modem cables have been invented yet). **Dave**

### Getting in print

I'm enjoying the September covertape, especially *Screen Designer*. You can get some pretty crazy designs out of it, but I was thinking, and this is usually a dangerous thing in my case – it's best to hide all sharp objects and turn off the mains – how good it would be

### Poets' corner

Could you help me? I am starting a PD library (tape only). My set up is like this: My Library's PD, And catalogues are free, No pricey games nonsense, My games are only 10p, Or even less, That's PDness.

Need a cheat? I'll be hard to beat, No need to be concerned, Your tapes will be returned, In less than a week, The truth I speak.

If you have PD, Send it to me, Get hopping,

We'll do some swapping, I may not be the best, But there's a free contest. A ticket you'll be sent, For every £1 you've spent, It's a monthly draw, With prizes galore,

Well, that'll have to do, It's over to you, If you like what you see, Get in touch with me. **John Jones, Northumberland**

The strange thing is that you can sing this poem to the tune of *Faces* by 2-Unlimited. In fact, you can sing it along to any song by 2-Unlimited song. Heck, you can sing anything along to anything by 2-Unlimited. **Dave**

### Transference of guilt

In reference to your September covertape. You glibly inform us that we are unable to transfer *Screen Designer* to disk and that if we want one we must send £2 to Ablex. What you seem to be doing is in effect levying a surcharge on those of us who prefer to work from disk. Either that, or you are getting sloppy and are unable to get your technical act together to get the product right for publication day. Whatever the reason your value for money index is slipping since this is making the magazine £4.95 instead of £2.95 which does seem to me a touch excessive. **Screen Designer, available in glorious tape-o-vision.**

I'm sorry you think we're penalising disk owners but believe me that is not the case. The tape-to-disk program is an extra which we put on the covertape when we can but it does not work with all programs. To write specific transfer software for these programs would take time, money and tape space that we cannot afford. It would also mean that we would have to raise the price of the magazine; this would be penalising tape-users which seems a lot more unfair.

It has never been AA policy to put a transfer program on the tape; we have when it has been possible. But the package you buy when you hand your money over for AA includes a tape not a disk. So to say that the magazine costs £4.95 is simply not true. **Dave**

### The bottom line

Re: issue 97. Here are the answers:

- Page 4: No, javelin.
- Page 6: Because they're furry animals with red backsides.
- Page 8: False, he was aboard the Bounty.
- Page 9: Yes.
- Page 11: Tightly.
- Page 13: Tomorrow.
- Page 15: Black.
- Page 16: God?
- Page 20: Blow in...
- Page 21: ... it's ear.
- Page 22: Who is anyone?
- Page 24: See above.
- Page 25: Arnold.
- Page 26: &1RON
- Page 27: *My Father Is A Bunker Up Of Rat-Holes* (it really is a song title).
- Page 28: Depends how much they've drunk.
- Page 31: Only when its legs were pulled off and placed 5.5-inches either side of its body.
- Page 36: Bill and Ben.
- Page 37: The one after the eleventh?
- Page 38: They've moved?
- Page 39: Only if it gets up enough speed going downhill.
- Page 40: Dead.
- Page 44: Nuts and bolts.
- Page 45: His Mum and Dad.
- Page 46: Because you can't get it.
- Page 49: Kit Kat.
- Page 50: Because you can't eat them.
- Page 51: No, it was in a steam roller.
- Page 52: Bambi.
- Page 54: I prefer Party Political Broadcasts.
- Page 55: Cannons.
- Page 58: Dinner at the Ritz.

Many thanks for a great mag. **C Osborne, Llandrindod, Wales**

And if you don't know what that was all about order issue 97 from Back Issues (see page 25) right now. **Dave**

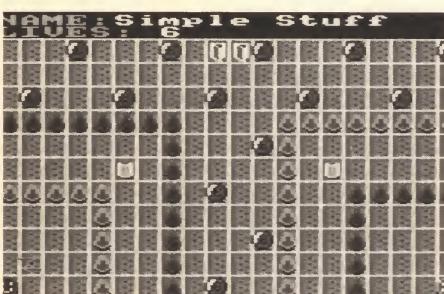

# Public Domain

**It's strange, y'know, this Public Domain lark. People write games and utilities then distribute them and expect no financial reimbursement. But who's complaining? Dave Golder and Tim Blackbond certainly aren't.**

### The Smiley Affair

By Malcolm Dowse, Alex and James. Available from Amsos. Cat No. APG 18.

Don't panic! This has nothing to do with turgidly long, slow-moving, worthy-but-dull and completely incomprehensible BBC spy series. A game that was really based on a John Le Carré story would have to be a strategy affair in which your enemies change sides every few moves, you haven't got a clue what character you're playing or what the point of the game is and would probably take you around three and a half years to complete.

**The Smiley Affair is a two-player game in which – gasp – you need to co-operate.**

The *Smiley Affair*, on the other hand, is a fast-moving, two-player puzzle game, that you'll probably master in couple of hours of intensive play. But believe me, those couple of hours will be a great deal of fun.

The game features 83 maze-like levels, the aim in each being for both players to reach the exit before the time runs out. It ain't a race because you actually have to help each other; co-operation is the key to success here. In fact, most of the fun comes from the ridiculous arguments that ensue when one of you makes a mistake during a frantic rush to an exit, and both of you end up dead.

There are loads of different pick-ups – such as bombs, magnets and shields – and life-

### Mailbag

**Gettin' better all the time**

Being an ex-subscriber to *Presto News*, I was more than a little bit upset when the magazine closed down. But things seemed to cheer up a little when I heard of the forthcoming diskzine *Better Than Life*. Would anybody mind if I asked when it is actually due for release and how much it will cost? **Bob Cooper, Appletreewick**

*Better Than Life* is actually very near completion. The main code for the disk-system has been perfected by a certain Mr Richard Fairhurst and so far it's looking extremely good. As for the articles, about 81K of text has been written along with another 80K left to go. Price? It'll be public domain, so don't expect to pay much. **Tim**

### Newcomer's corner

I have only very recently started being interested in public domain (I have to confess, I used to skip past these pages in search of the games reviews – please forgive me) and the idea of it interests me. I have just a couple of questions to ask:

**1** I have been told that once purchased, you are free to copy public domain programs and distribute them to you heart's content? Is this true?

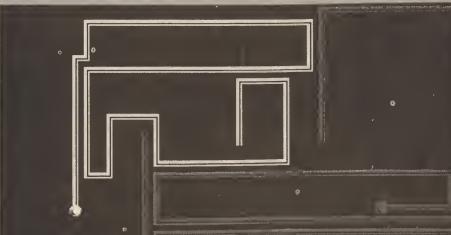

**2** Being a bit of a games fan (I don't like serious stuff much), could you advise me which are the best games available in the public domain?

**Thomas McElveen, Essex.**

The answers to your questions:

**1** Indeed it is true. If you are really keen, you could take the free-to-copy idea to the very extreme and start your own PD library.

**2** More and more good games are coming into the public domain these days. For example, *Puzzinx*, *Forcefield* (debugged edition), *Atomic Demo*, *Spots*, *Axys* and *Power Tetris* are just a few (personally, I'd recommend *Croco Magneto* – *Simon*). Every one of those games should be available from most PD outlets. **Tim**

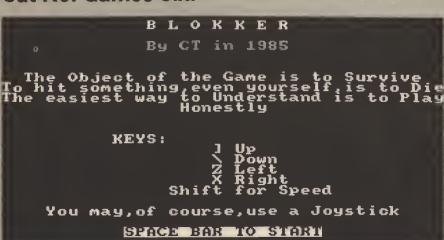

**Some things in life are tricky. Some things are easy. The Smiley Affair is moderately tricky in a one step above not quite very easy sort of way, if you get my drift.**

**83%**

**75%**

### Blokker

By CJ, available from Presto PD. Cat No. Games Six.

**A picture paints a thousand words. Actually it's only a couple of dozen in this case.**

**Blokker** is simple. It's the usual *Tron*-influenced, speed-around-on-a-light-cycle-in-an-attempt-to-make-your-opponent-crash-into-your-trail type thing. The best bit about this game is that it's been designed with the single player in mind, so instead of having a really slow and easy-to-beat opponent (ie, a mate who's as rubbish at the game as you are), you come up against ever more psychotic speed demons intent on crushing every bone in your body. If this is what's known as terribly good fun, my name is Flibberty Gibbets. (Hi, Flib, how're you doin' – Simon.) **Tim**

our Christmas 1985 (AA4) we gave away the games Kung Fu and Number One as special Chrissy presents for our readers. The covertape became a regular item with issue 67, but we gave away others at irregular intervals in between. **Dave**

**Count Duckula 2** This was probably the worst game ever on the CPC, though with a mark of three per cent strangely it didn't receive the lowest mark we've ever given (see *Fruit Machine Simulator*). It really has absolutely nothing going for it, apart from the fact that it's available on cassette and so you might not be able to load in the first place (see *cassette*). **Dave**

**Crash** Something that CPC programs do a lot. We have compiled the AA league of worst offenders:

- 1 CPM
- 2 ROMDOS Excel – The original version before it was updated.
- 3 Anything Simon writes
- 4 Most games when you've got a Multiface connected to your CPC
- 5 Any French demo running on a Plus.

**D**  
**Darling, David and Richard**  
Teenage founders of CodeMasters.

Their most memorable TV appearance saw them already distressingly wealthy, with one of 'em (these Darlings all look the same to me) coping with a still-breaking voice! **Simon**

**CPC** Right. There are six models in total. The first three are the 464, the 664, and the 6128. The easy way to work it out is that the first number stands for the storage system (a 4 meaning tape and a 6 meaning disk), and the rest indicate the amount of memory on the machine. Next up came the GX4000, which was a cart machine

(destined to end up being sold on market stalls for a fiver a shot). Finally, we had the 464 Plus and the 6128 Plus, which were 464s and 6128s with GX4000s strapped to them. History fans might like to know that the 464 and 664 were released in 1984, the 6128 in 1985 with the Plus and GX4000 models following in 1990. **Simon**

## CLASSIC GAME

**Dizzy** Probably the unluckiest hero of all time, and one of the most enduringly popular characters on 8-bit computers., CodeMasters' *Dizzy*, nick-named Mr Easy-To-Draw by, er, just about everybody actually, was the brainchild of the Oliver Twins, who also unleashed *Seymour* on to a unsuspecting world. Basically an egg in boxing gloves, *Dizzy* has appeared in no less than 12 games, seven of them being indistinguishable... er, sorry, I mean adventures. The others were an assortment of odd arcade things ranging from a *Pacman* clone to the universally derided *Klax*-inspired *Panic Dizzy*. A

number of supporting characters, such as Grand Dizzy, Daisy and Denzil, each one slightly less easy to draw than the last, have appeared over the years. **Dave**

The *Dizzography* (adventures in yellow): *Dizzy* • *Treasure Island Dizzy* • *Fast Food Dizzy* • *Fantasy World Dizzy* • *Kwik Snax* • *Magic Land Dizzy* • *Panic Dizzy* • *Spellbound Dizzy* • *Dizzy Prince of the Yolk Folk* • *Dizzy Down The Rapids* • *Bubble Dizzy* • *Crystal Kingdom Dizzy* (please, no more – **Simon**).

**Data** The technical-sounding, computer-jargony word for information. **Simon**

**Database** Basically a software filing system. You throw it a load of information in any old order and it throws it back at you in a more organised, and easy-to-access way. Generally used for address books, mailing lists, sports results and cookbooks. **Dave**

**Desktop Publishing (DTP)** Software which enables you to layout a printed page using boxes, columns, a variety fonts and letter sizes and pictures to produce magazines, posters, cassette covers, etc. **Dave**

**Disk** £3 for a disk! Can you believe that? (By the way, we prefer to spell it disk rather than disc, just because we can, okay?) **Simon**

**DMP** Amstrad's range of printers that sold well until everyone realised they were naff. **Simon**

## CLASSIC GAME

**Elite** Oh my God! It's the game! When you get this with issue 100, you'll possess the best game ever. In fact, you should convince all your friends to buy it, whether they own a CPC or not – everyone must own a copy of this game! **Simon**

## E

**Editor** Someone who sits around with his feet up all day. **Simon** (You're fired – **Dave**.) Oh yeah and they fire people. **Simon**

**EPROM** A chip. See the entry for background ROMs. EPROM, incidentally, stands for Erasable Programmable Read Only Memory. **Simon**

**Epson** A printer manufacturer (yawn). **Simon**

**Error** If Simon starts banging his head on his desk we know that he's encountered one of these little gems in some program he's written. Strangely he has a permanent bruise on his head. **Dave**

## F

**Flops** Remember the GX4000 (you should do, we rag it enough)? You can now pick them up a local markets around the country for a fiver. This defines flop as far as I'm concerned. **Simon**

**Fanzine** A small home-made magazine produced by enthusiasts. In fact, we've just featured one in *Amscene* this month, so check it out. **Simon**

**Flight Sims** With the possible exception of management sims, flight sims are the most inscrutable form of games. You need to memorise keyboard loads of controls and be ready to endure hours of nothing much happening. But loads of people love 'em, and reckon that games like *Gunship* are the bees knees when it comes to aeronautic endeavours. **Dave**

Fact: over 70 per cent of Flight sims start with the letter F.

**Font** Printed letters come in loads of different styles; ie, compare what you're reading now to

the typeface used for listings. Each style of lettering is known as a font. **Dave**

**Format** Being the layout of a disk. The main two you'll come into contact with are data format, allowing 178K to be stored, and system format (used mainly by CP/M), allowing 169K to be stored. **Simon**

**Forth** A programming language. **Simon**

**FRGs** Fantasy Role Playing games. Adventures basically. **Dave**

**Fun School** "Oh, go on, mum. I won't just use it for games."

Computers can be educational as well." Yes *Fun School* has always been a brilliant way of convincing your parents that buying you a computer is a good idea. The *Fun School* range is probably the most well-known range of educational software. **Dave**

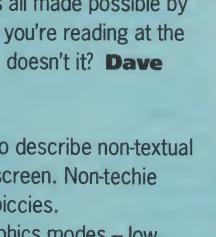

## CLASSIC GAME

**Freddy Hardest** Oddly, we couldn't come up with a truly classic game beginning with F (cue a thunderous thud as thousands of *Flimbo's Quest* fans' jaws hit the floor) but we reckon *Freddy Hardest* is pretty darned funky and about the best of the bunch. It's a science fiction platformer/shoot-'em-up/beat-'em-up hybrid that's got the gameplay of something very playable indeed. **Dave**

**Future Publishing** AA was the first magazine Future published. Now the company produces 32 magazines, most of them about computers in one form or another and it was all made possible by the humble little magazine you're reading at the moment. Makes you think, doesn't it? **Dave**

## CLASSIC GAME

**Hudson Hawk** A rarity – a film licence that was actually better than the film. A platformer that combined the all requisite elements to produce the perfect mix to create pure

**Hard Drive** Imagine a disk drive that has a disk permanently fixed inside it. This means that the disk itself isn't permanently being knocked about all over the shop, allowing the storage resolution (the amount of bits of data per bit of space) to be higher (with more bits of data packed closer together). This in turn means more data can be stored on the disk. You can buy hard drives to store anything between 10MB and, well, practically anything up to a gigabyte and

## CLASSIC GAME

**Gunship** Generally regarded as the best flight sim ever on the CPC. *Gunship* was also the first helicopter sim, and one of the few flight sims that people who normally loathe flight sims actually think is

really rather good. **Dave**

**GX4000** See Flops. **Dave**

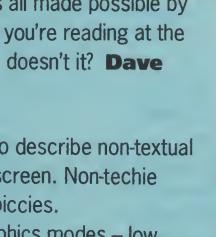

**Hexadecimal** A counting system based on the number 16 as opposed to 10 in the decimal system or 2 in the binary system. It's used in higher-level programming such as Machine Code because computer memory is arranged in blocks of eight bits. Of course, how obvious. Er,

anyway, what happens is that when you count and get to nine, the next digit is A, after that it's B and so on up to F, after which comes 10. In other words, counting to 10 in hexadecimal goes, 1, 2, 3, 4, 5, 6, 7, 8, 9, A, B, C, D, E, F, 10. When you get to 99 in hexadecimal, the next number is A0, followed by A1, A2, and so on. Hexadecimal numbers are prefixed with &, so &20 is actually 32. How's that for an idiot's guide to hexadecimal? (Poor, very poor – **Simon**). I wasn't asking you. **Dave**

**Hairy Happening** It's me! Okay, strictly speaking, I'm the *Hairy Happening 2* – The Revenge Of Hairy (Ex-Ed Rod Lawton's beard was the original), but it's still me! **Simon**

## CLASSIC GAME

**Hudson Hawk** A rarity – a film licence that was actually better than the film. A platformer that combined the all requisite elements to produce the perfect mix to create pure

**Interpretor** When you write a BASIC program, it's stored in BASIC form. When it's run, the CPC does not run a BASIC program. Instead, a routine called the interpreter converts the line of BASIC into Machine Code, and runs that. **Simon**

**Interrupt** A little routine that interrupts

whatever the CPC's doing at a regular time interval (say, every 50th of a second) to get it to do something else. They're usually written in Machine Code, and are mainly used for timing music. **Simon**

over. Erm... the CPC hasn't got one, though, which is a bit of a shame. **Simon**

**Hardware** Here's a few bits of hardware you really should think about getting hold of to make your computing life a full and rewarding experience: a CPC (you don't say? – **Dave**), a monitor (Er... Simon? – **Dave**), plug (editor waves staff writer's P45 around in the air), Multiface, Hackit, ROMboard, joystick, disk drive, tape deck, and, erm, AA. **Simon**

**INC** It's a Machine Code command to INCrement the contents of a specified register by one (techie blah, in other words). **Simon**

**IK+** Forget Street Fighter 2. Who needs another beat-'em-up when you've got IK+? Great graphics, excellent controls, decently-sized sprites, it's got the lot. Apart from the cheat, that is. Y'see on the C64 there was a keypress combination you could use to make all the fighters drop their pants. Ah, well, you can't have it all. **Dave**

**Incredibly Popular** See *Dizzy*. **Dave**

**Interface** Imagine someone who could only speak French trying to communicate with someone who could only speak English. As you can probably imagine, things aren't going to get very far. This is where an interpreter comes to the rescue, by converting French into English, and English into French. This, in essence, is all an interface does – it converts signals between two incompatible languages, connectors or protocols. **Simon**

**Interminable** See *Dizzy*. **Dave**

**Interpreter** When you write a BASIC program, it's stored in BASIC form. When it's run, the CPC does not run a BASIC program. Instead, a routine called the interpreter converts the line of BASIC into Machine Code, and runs that. **Simon**

Is this the end?  
Nope, there's loads more to come next month in Volume Two.  
See you there  
**Dave**

# Complete budget budget

So here we have it - the complete list (as promised last month) of every budget game currently available from the major CPC software houses. All of 'em cost a mere £3.99 each; that's a tenth of what you'd pay for a console game, and lot of them are a darned sight more playable to boot.

Next to each title, you'll find a three letter code indicating which label is selling the title, and a star rating for how good the game is. The label codes are explained in the boxes dotted tastefully around the page. Happy hunting.

## Disclaimer

Okay, we admit it, this list's not exhaustive, but it does represent every budget game you can get hold of commercially from the companies listed. In most cases, if a company isn't listed, you can be fairly sure they have ceased trading (at least on the CPC), or they've only released three or four games. Anyway, happy spending and now you won't have to break the bank.

# Go Cartin' 3: The final chapter?

A long time ago in a galaxy far, far away lots of things happened that weren't remotely connected with cart games. But that didn't stop the AA crew from completing their round-up of CPC cart games currently available, strangely.

## Navy SEALS

Available from The Trading Post ■ 0952 462135

It's a crying shame, I know, but unfortunately I could never join the US army; I've got flat feet, you see. Oh, and a brain. That rules out Marines as well, I suppose. What's left, then? Navy SEALS? Not likely after playing this game; it's the worst recruitment ad they could ever have – you keep ending up dead. The SEALS bit stands for Sea, Air and Land.

But there's no sea in the game. And not much air (apart from the stuff you breath). Navy LS then.

You play the part of a 'meat-head with a mission', the mission being to storm a harbour, prime loads of detonators and run for it. That's just the first part of the game, though; next you have to knock out a communications tower and run for it. I can

Derek had a fairly secluded life as a plumber. But with his increasing fascination for sewers, he was finding it ever more difficult to go out and meet new people.

I couldn't be bothered to do another grab and you probably wouldn't have been able to notice the difference anyway.

is slightly larger, so you can use that to line up shots instead. Unfortunately, white also happens to be the predominant colour in the background.

Each level has a different mission such as 'search enemy bunkers' or 'gather information' but they all translate as, 'shoot lots of people'. The difficulty in this game is having two things

attacking you at once, which is how the programmers justified a two-player option. But in two-player mode you just spend you whole time trying to work out which sight is yours

If you find pleasure in games like Repetitive Sim 2, then this is a game for you. If, however, you don't enjoy tasks on the intellectual level of cleaning your toenails, steer clear.

Simon

missed the original (which was also nob), here's a rundown of Wolf (and therefore Thunderbolt): A street scrolls side-to-side or towards you. Soldiers, jeeps or helicopters glide (yes, glide – the soldier's legs don't move) across the screen, letting loose with the lead in your direction. For defence purposes, you have a gun and a few grenades with which to kill the bad guys – assuming you can find the target. You see,

Lift those elbows, stretch those muscles, keep those chest muscles taut... 2... 3... 4..."

## Operation: Thunderbolt

Available from The Trading Post ■ 0952 462135

I'll just copy an Op Wolf review! You may find this quote from the publicity material for *The Lazyman's Guide To Software Publishing* by Dr K Ching a little telling:

"Why bother spending time developing new releases? We show you how to take an old game, change the name and graphics and release it as an original (or if your customers are really stupid, a sequel)." So, for all of you fortunate enough to have

your gun sights are represented by a pixel. Yep, I said, 'one pixel'. To quote:

**Pixel:** A compression of 'picture element'. This is the smallest element of a screen image. – Chambers 'Making Sense Of English In Computers'

That's small. Too small. Luckily (in the loosest sense of the word) every time you fire, a little white explosion appears on screen; this explosion

is slightly larger, so you can use that to line up shots instead. Unfortunately, white also happens to be the predominant colour in the background.

Each level has a different mission such as 'search enemy bunkers' or 'gather information' but they all translate as, 'shoot lots of people'. The difficulty in this game is having two things

attacking you at once, which is how the programmers justified a two-player option. But in two-player mode you just spend you whole time trying to work out which sight is yours

only assume that every other level involves detonators and running for it as I never really got that far (we'll discuss this later).

I'm human. Apologies 'nall, but that's the way I am. If I get shot in the head, I die. If I get shot in the foot (if you really want to get pedantic about this), I don't die, but I still don't feel much like storming any fortresses. In Navy SEALS, unlike in most other games, your sprite can't catch four bullets in the head, be molested by a giant turtle, withstand a kipper around the kneecaps and still go on to complete a level. It's a decent surprise to finally play a game that happily admits the fact.

The downside to this is that you end up with a game that's buttock-clenchingly difficult. You've got three minutes to blow up a harbour. The quickest possible method takes about two and a half minutes. That's tight. So you've got 30 seconds to spare, and you're running round with about 20 enemies trying to stop you. One shot from them and you drop like a stone, losing valuable time, and probably restarting from the opposite end of the map (each detonator you set doubles as a restart point). That's not fair, but then life isn't fair, is it?

To combat this, you've got five blokes. That's not one bloke five times, but five separate blokes with five different faces. Great touch. Utterly pointless, but great. I'm not sure of their names, but ones along the lines of Joe, Mac, Jack, Hank and Chuck would be a fairly safe bet. On later levels, you have the option

to continue, re-incarnating your five marines which is definitely a Good Thing; with a game this difficult, it'd be almost unplayable without this feature.

The graphics, as you would expect, are well drawn, very colourful and excellently animated. The scrolling is smooth and follows the player rather than flipping from one screen to the next.

Sonically, SEALS can get a little repetitive. Yeah, in-game sound effects are nice, with no overrated or overbearing noises, but the tune is pig-annoying to say the least. It should win awards for irritation on a subliminal level, but hey, there is a volume control, you know.

Grab factor and staying power? Well, it's almost impossible to predict how long your

The first casualty of war is innocence. In this case, however, the first casualty of war is Arthur – the bloke standing completely unaware with a tea towel on his head.

patience will last with this game; if you do stick around long enough to complete the first level, you'll be hooked. In fact, the only obstacle to overcome in order to enjoy this game is getting the hang of the controls. Once you get your blokey running around smoothly and you learn the timing of his moves, you'll do just fine and make decent progress.

So, how does all this translate into a final rating? Well, a slightly easier first level which allows you to get used to the controls would help matters, as would a bit of variation in activities and bad guys; the mark reflects these slight oversights in the design. But I reckon you should definitely try to get hold of Navy SEALS, and persevere to get a little further into the game because things really do take off. Simon

## Phazer games

Available from The Trading Post ■ 0952 462135

There's nothing I like more than a little target practice before breakfast (I prefer about 10 hours sleep – Dave) and with these two Phazer games there's less blood to clean up before the rest of the world wakes up and finds out what I've been doing.

To be honest he Phazer was a gimmick that never really took off; it's a gun that you connect to your CPC and use to blast away at things on screen. You can still get hold of them new for £30; the main problem is that there were only ever two games designed to be played with them. You get Skeet Shoot when you buy the gun, while Enforcer is available separately.

Skeet Shoot is clay pigeon shooting the American way. But so you don't get bored you travel around the world, taking in the delights of places like Bavaria and Mount Fuji. Can you imagine telling your careers advisor or the local job centre that you want to see the world while destroying plates with a shotgun? Maybe if you owned a country estate and had no chin they'd take you seriously.

Oh no! The unthinkable has happened. I've run out of bullets. I suppose I just sit here defenceless waiting to die now.

There I was having a great day time shooting a few clay pigeons, then some great bird starts doing his unmentionables on me.

It sounds simple enough but this game's a lot harder than Skeet Shoot. Those baddies just keep on coming and the good (and apparently very stupid) citizens of Chicago keep getting in the way. The pitifully small supply of bullets doesn't help much either; extra ammo is found by shooting the 'stick of dynamite-type things' which occasionally appear when you kill a wrong 'un.'

Frankly, I wouldn't spend £30 on the Phazer; neither game is worth shelling out that much dosh on. But if you see a Phazer going second-hand at a decent price, check it works, buy it and you've got access to two unusual and entertaining games. Sarah

## The Enforcer

# Switchblade

Available from The Trading Post

Having a robotic arm with interchangeable appendages is all very well, but has Switchblade's hero got an attachment for getting stones out of horses' hooves?

**A**s Confucius once said, "Never undersell yourself." Or was that Yoda? Actually, it could have been Victor Kiam. Whoever it was, he knew a thing or two. So if you produced one of the hottest games ever on the CPC featuring a martial-arts hero with a bionic arm which can be fitted with a massive range of futuristic weaponry would you call it Switchblade? That sounds more like a licence of West Side Story.

But what's in a name, eh? Switchblade is superb and, frankly, any name other than *Buy This Game, It's Amazingly Brilliant And*

"Is this the platform for the Bakerloo line?"

Everybody Should Own It (Yes, Even Terry Venables) would be underselling it.

Hiro (which, strangely, sounds a bit like hero) is the cyberpunk star of this show. He's the bloke I was telling you about armed with the impressive, er, arm. He's the last of the Bladeknights (whoever

At times like this, Hiro wished his mum had called him Coward.

they were) and he's got a rather important task to carry out. Y'see there's this geezer called Havok who's been the evil dictator of the planet Thraxx since he shattered the mighty Fireblade into 16 pieces. Hiro reckons the best way to bring him down a peg or two is to reassemble the sword. If I was Thraxx, I'd be worried. This Hiro guy is a

hell of a fighter. Apart from his Swiss-army cyber-arm, he's also a martial arts expert.

The action starts on the surface of Thraxx, but most of the game takes place in the caves beneath the planet. It's a massive Rick Dangerous-style platform romp. Under your expert guidance Hiro has to explore this subterranean, flip-screen world searching for the bits of the sword.

Pick-ups will either increase Hiro's cyber-arm capabilities, increase his energy or give

him extra lives (the usual stuff, really). Baddies come in all varieties, from Schwarzenegger-style gladiators to scorpions, plus some impressive end-of-level guardians; not that there are levels as such, but there are points at which you can't progress further unless you blast the bigger baddies.

The control system is weird at first, but when you get used to it, you realise that it suits the game perfectly. Walking and jumping is achieved with the direction controls, which is fairly standard, but hitting, kicking or firing weapons is more than a case of pressing the Fire button. There's a strength bar at the bottom of the screen; the longer you press Fire the more strength you build up. Hiro will strike out in different ways – punch, kick or swing kick – depending on how much strength has built up before you let go of the Fire button. If he has a weapon strapped to his cyber arm, more strength enables him to blast away more rapidly.

Okay, so the animation isn't the best ever witnessed on the Plus, but the backgrounds are brilliantly detailed and the sprites are impressive. Unfortunately, the graphics are about the only

enhancement this cart has over the cassette version of the game. Disappointingly, it's no faster and the layout of the platforms and the positioning of the baddies are identical.

Which is a shame because while I can wholeheartedly recommend the game itself, I wouldn't recommend you buy it on cart because the cassette version is just as good. **Dave**

88%

## The end... or is it?

And so, as the last cart rides off into the sunset, we say goodbye to the on-going feature, safe in the knowledge that the world knows which carts to buy and which to shun at office parties... or does it? Could there be more carts at large, waiting to be rated? Tune in next month...

# Cheat Mode

The theme of the issue is cheating, but this is one section of the mag that's been upholding that particular noble art for many years. Lee Rouane is your guide and mentor...

## Spellbound Dizzy

Peter Crosby has unearthed a fabulous keypress for Dizzy's hardest adventure yet. Peter informs us that if you press SPACE to start the game, then Q to quit and finally type IWANTANOMLETTE quickly on the title screen, the border should FLASH to tell you that the cheat is active. While playing the game, pressing C will bring up a menu with the following options:

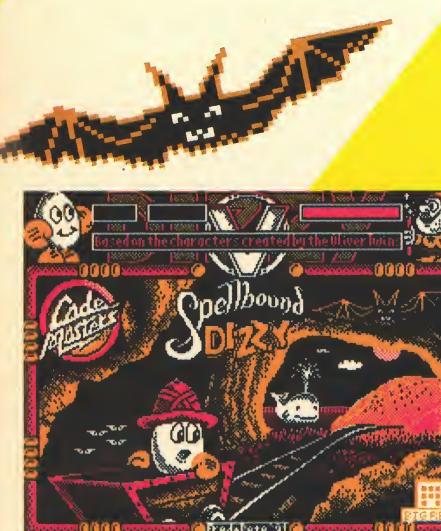

- L ..... allows you to increase your lives by one.
- P ..... gives you an extra five stars.
- A, S ..... allow you to toggle between items you're carrying.
- Z, X, K, M ..... allow you to move to a desired location.

Dizzy looks like he's in hot water here. I wonder if that means he'll end up boiled?

## Ninja

Paul Hornsey is the man responsible for this listing which provides a healthy dose of invulnerability to even up the odds. Hmmm, invulnerability eh? I could do with that when I ask the bloke down at Stabros' Take-Away Food Shack what he puts in his kebabs.

Classic crossword clue: GEES (9,4). Hint - think Dizzy. Answers on a postcard...

## Lords of Chaos

A few months back some tips for that great RPG Lords Of Chaos appeared in the hallowed Cheat Mode pages. Not to be outdone Alexander Moffat in Bushey, Hertfordshire has sent in a near-complete playing guide for all of you still struggling with the vampires or locked in the spider room.

## General tips

- Let your wizard kill everything; you get twice as much experience. Just equip him with a decent →

This is supposed to be chaos? Hah, it's nothing compared to Simon's desk.

## The Manic multipoke mania zone

Fighting the good fight this month with the good old mind-boggling Z80 code are Archie Fulton and Alex Cochrane. These two seem to have the Multiface scene sewn up, so let's see some new/old faces eh? (Paul Stewart Williams, Peter Curgenven, Carl Surry and John Brown take note). We don't want to have to call in the Monopolies Commission to investigate. As usual, the initials after the game reveal who saved your lives this month.

# The Examiner

"Go west," say The Pet Shop Boys. "Go east," says Debby Howard. Who would you believe? It all depends on whether you prefer to trust someone with a fruitbowl on their head or AA's adventure specialist. And whether you're playing an adventure, I suppose.

## REVIEW

### The Last Snowman

Tape £2. Disk £4. WoW Software, 78 Radipole Lane, Weymouth, Dorset DT4 9RS. Cheques/POs payable to: JG Pancott.

To you, me and the Wicked Witch of the West, melting might not be our ultimate goal in life, but for snowmen, well, it's what they live for. When a snowman dissolves, you see, it's only his physical form that cops it; his consciousness, soul, life force, karma, spiritual self (depending on your preference) passes on to a higher plain of existence, a sort of deep frozen Nirvana where chocolate never melts in your hand and all the snowmen live in perfect permafrost harmony.

But Jack Frost (the cold-hearted villain in this tale) has ruined it all for one snowman by freezing him so cold he'll never melt. Jack also tore up the piece of paper which would have told the snowman where to go in the unlikely event of someone being able to melt him! Your task is to find the seven pieces of paper and put them back together and then to thaw out *The Last Snowman*.

### Kids' stuff

If it all sounds a bit *Jackson*, that's because it's been written for kids (although if you're a beginner in adventuring, it also might suit you – if you can handle the cuteness). The adventure has been written by the same authors as the *Angelicus Saga* and *Angelicus Answer*, Margaret and Mike Crewdon.

Instead of the normal north, south, east and west, you have to go forwards, backwards, left and right. You can choose to see the full instructions before playing the game or give them a miss. A tune and a picture of the snowman accompany the loading.

It was written with the help of GAC (Graphical Adventure Creator) so there are loads of pictures. I particularly liked the scarecrow and the snowman. At all times you're required to be polite and helpful to all the characters you meet. The graphics can be turned off, but might miss out on vital clues (that's a hint, by the way).

### Personal touch

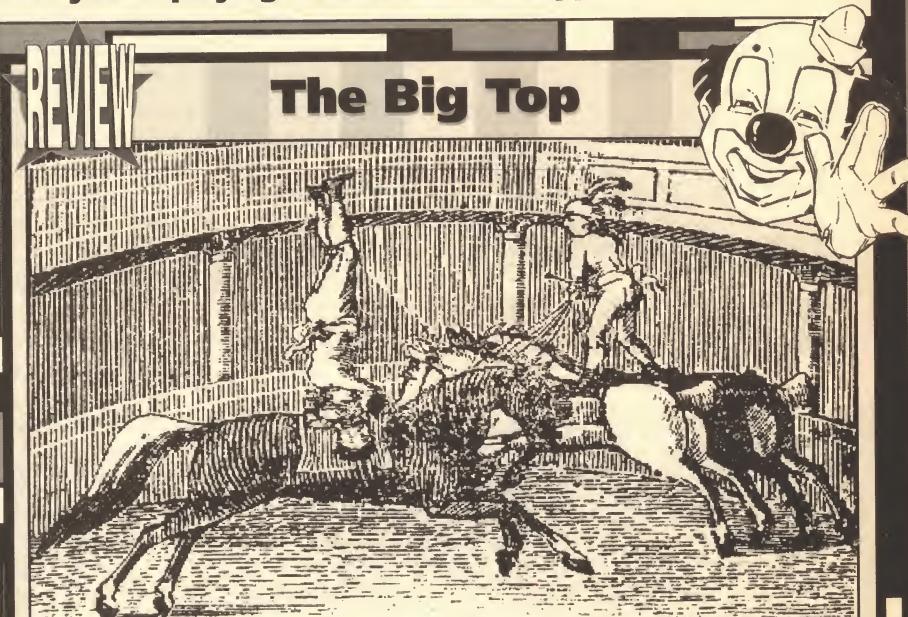

One excellent touch is that each game is personalised. *The Last Snowman* addresses the player in a number of places. When you send off for the game, tell WoW the name of the child that's going to be playing it and they'll insert it into the game.

If you have a green screen monitor you might have difficulty reading the text which is dark red against a dark background. Apart from that there are no major faults, and I reckon young kids'll love it.

89%

## REVIEW

### The Big Top

Tape £2. Disk £4. WoW Software, 78 Radipole Lane, Weymouth, Dorset DT4 9RS. Make all cheques/POs payable to: JG Pancott

If your kids are at an age when snowmen and Jack Frost just ain't hip no more (which these days seems to be anything over three-years old) then this adventure, which is aimed at a slightly older age group than *The Last Snowman* is designed for, is more likely to hold their interest.

The circus has come to town, and like most children, the main character (who we'll call Fred for the sake of argument) wants to run away and join it. So off he goes to see the ringmaster to ask him if he can join the circus. The Ringmaster says he'll consider it, but he gives Fred loads of tasks to do before he will accept you (this sounds like exploitation of child labour to me – Dave). So you find yourself running around playing throw-a-dart, hoopla and loads of other stuff.

One thing I found annoying (which probably means that children will love it) is that the game won't work with the graphics mode turned off. But overall, it's a fairly decent game that should stop your kids kicking footballs through your neighbours' windows for at least a couple of hours.

The Big Top has been written by Ronnie Slater using GAC, so it features loads of pictures. When

you first load up the game you're requested to input whether you're male or female; entering certain locations can depend on sex. To get a list of the vocabulary just type in HELP. The adventure is easy to map

*sad clown*  
Not a lock  
You are at the back of the big top  
inside one of the changing rooms. You  
can only go South. You can also see a  
sad clown

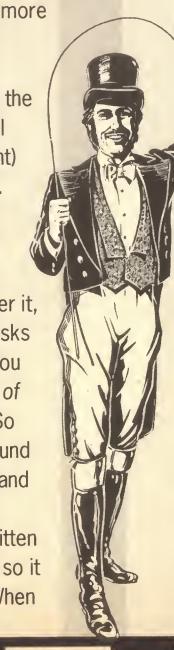

Now what?

And here, ladies and gentlemen  
we see the dangers of  
sunbathing beneath a net.

although I reckon that some of  
the puzzles would be a bit  
tricky for very young kids; the EXAMINE  
command comes in very handy in a  
couple of locations. I think it would be  
more suitable for kids aged 10 years and up  
(but who's to say you haven't got a child  
prodigy on your hands?).

One thing I found annoying (which probably means that children will love it) is that the game won't work with the graphics mode turned off. But overall, it's a fairly decent game that should stop your kids kicking footballs through your neighbours' windows for at least a couple of hours.

70%

## Letters

I have a cunning tip which works on PAWS games (such as *The Spiro Legacy*) and should work on GAC games too.

When you're trying to find out whether a 'prop' which appears in the description of a room has any bearing on the plot of the game, choose an object you are carrying that has a definite unique

description and EXAMINE it. Now examine the object you are interested in. If you get a response like YOU SEE NOTHING UNUSUAL

then type EXAMINE IT. If you get the response you got from the object which is definitely part of the game then you know that the object you are interested in is not part of the game! If you get another neutral response then it is part of the game!

Mark Stewart, Derbyshire.

Have you ever tried loading in a saved file from one GACed adventure into another? I have discovered some very amusing inventories when trying this out!

P Holland, Birmingham.

Yes, I must admit I'm guilty of this little trick too, it works with Quilled adventures too!

Debby

## Lords & Ladies of Adventure

The Lords and Ladies of Adventure aren't like real landed gentry. They don't sit around in large manors complaining about tourists trotting around their ancestral homes and wondering why they ever abandoned the serf system when it was so useful for subjugating the working working classes and getting someone to clean your windows for free.

Nope these Lords and Ladies are here to help the less fortunate, as long as the less fortunate are stuck on a CPC adventure, that is. If you're having problems with one of the games listed below, these kind souls are willing to help you. If an address is given enclose an SAE with your enquiry and DON'T ask for a full solution, as you'll probably be disappointed.

Adult 2, Can I Cheat Death?, Dungeon, Firestone, Jason & The Argonauts, Spacy, Tizpan, Welladay – Stuart Mainland, 2 Douglas Road, Coylton, Ayr KA6 6JJ.

## Give us a clue

### Hitchhiker's Guide to the Galaxy

- To get started in the adventure don't forget to switch the light on.
- Once outside lie in front of the bulldozer and wait until Ford offers you a towel.

### Knightmare

- Give the water and food to the old man, and then ask and go east and dig with the spade that the old man gives you.
- To get the locket from the old maid, give her the gold several times.

### Who's Afraid of the Balrog?

- Examine absolutely everything. You could be surprised at what you find.

WHO'S AFRAID OF THE BALROG?  
A text only game written with the G.A.C. Utility Incentive (c) 1985

Press a key for introduction

A little known fact is that Simon actually did some freelance modelling work for the intro screen of Who's Afraid of the Balrog?

- When you open the door and go into the kitchen for the first time, close it again.
- Don't drink the cocoa yourself. Somebody (inside the lair) needs it, and the same goes for the mag.
- The numbered floor is perfectly logical. But you need something to give you a hand with the order.
- Scottish viewers, if you saw that episode of Taggart with the snakes in people's houses and beds and things, well...
- Examine things!
- JUST FOR LAUGHS: Cut the cable (in the boiler room) with the knife!

### Worm in Paradise

- The Dagget will go down 100 credits a day in price, so don't buy it immediately.

### Where To Go!

Get a load of this – if you send a stamped self-addressed envelope to any of the following addresses, within a few days you will receive a catalogue of all the adventures, new and released, that they've got in stock. And then you'll be able to order the ones you want. What a truly amazing concept.

- WoW Software, 78 Radipole Lane, Weymouth, Dorset, DT4 9RS.
- The Adventure Workshop, 36 Grasmere Road, Royton, Oldham, OL2 6SR.

You never know, it could happen... So make sure you're here if it does.

If it's happening in the CPC scene you'll hear about it first in Amstrad Action. So if you've got a CPC then Amstrad Action is an essential monthly purchase. And the best way to make sure you never miss a copy is to subscribe.

- Your copy of AA is delivered direct to you every month. No fuss, no bother.
- It's cheaper than buying from the shops because for each year's subscription you get two issues free.

- And don't forget that every month with Amstrad Action there's a cover tape packed with great games and superb utilities.
- So what are you waiting for? Subscribe to Amstrad Action now and live a hassle-free 12 months. You never know, it could change your life (probably).

Your guarantee of value'

This magazine comes from Future Publishing. Here's what we can offer you:

**Better advice.** Our titles are packed with tips, suggestions and explanatory features, written by the best in the business.

**Stronger reviews.** We have a cast-iron policy of editorial independence, and our reviews give clear buying recommendations.

**Clearer design.** You need solid information fast. So our designers highlight key elements by using charts, diagrams, summary boxes, annotated photographs etc.

**Greater relevance.** At Future, editors operate under two golden rules:

• Understand your readers' needs.

• Satisfy them.

**More reader interaction.** We draw strongly on readers' contributions, resulting in the liveliest letters pages and the best reader tips. Buying one of our magazines is like joining a nationwide user group.

**Better value for money.** Magazines you can trust.

Home of Britain's finest magazines.

AMSTRAD ACTION November 1993

# Next Month

Before Rainbow Islands there was Bubble Bobble.  
Before Silence Of The Lambs there was Manhunter  
Before World War 2 there was a lot of arguing.  
Before the news last night there was an interesting documentary on the sex life of a sea cucumber.  
AND BEFORE ISSUE 100 OF AMSTRAD ACTION THERE WILL BE ISSUE...

## AA99 THE FANZINE SPECIAL

We show  
you how  
to turn  
this...

...into  
this...

...using your CPC. Plus: we do a round-up of current CPC fanzines (and try to resist calling the feature 'Zine Scene') and the covertape will be packed with useful Desktop Publishing-type programs.

But it's not all work, work, work, because also on the covertape is the superb Stormlord, a stonking, horizontally-scrolling shoot-'em-up with springboards, keys, puzzles, the whole works (including the kitchen sink).

Stormlord blasts on to AA99's covertape

On sale:  
Thursday 25th  
November

NEW

## LC 200 COLOUR PRINTER PACKAGE

NOW YOU CAN PRINT OUT YOUR PICTURES IN FULL COLOUR!

- The Star LC200 Colour Printer not only prints in Near Letter Quality for your regular jobs but also prints out your pictures from Art Studio, etc., in genuine colour!
- LC200 is a full Centronics printer so it works with other computers (Amiga, ST, etc.).
- Made possible by DateL's unique colour printer driver - now you can have a hardcopy in up to 16 colours!!
- No more to buy - just plug in and print!!

PACKAGE INCLUDES... STAR LC200 COLOUR PRINTER RRP £299.00  
CENTRONICS PRINTER LEAD RRP £9.99  
DATEL COLOUR PRINTER DRIVER SOFTWARE RRP £19.99  
NORMALLY £327.98

COMPLETE PACKAGE NOW ONLY £239.00

COLOUR PRINTER DRIVER AVAILABLE SEPARATELY ONLY £19.99

- If you already have an LC10 or LC 200 Colour Printer we can supply the Driver separately.

- Simple plug in memory expansion gives instant extra memory.
- Features bank switching software for easy use by the programmer or for use as a data storage area.
- Ideal for use with the CPM 2.2 etc.
- The software also features some extra BASIC commands.
- 64K unit expands 464 to 128K.
- 64K unit brings 464 up to CPC 6128 memory configuration making a much larger software base available. Will work straight off with many programs designed for this unit (including OCP Art Studio - see Ad.).
- Bank switching done automatically by software (cassette 464).

ONLY £49.99 64K FOR 464
